**National Stereotyping, Identity Politics, European Crises** - Jürgen Barkhoff 2021

"The articulation of collective identity by means of a stereotyped repertoire of exclusionary characterizations of Self and Other is one of

the longest-standing literary traditions in Europe and as such has become part of a global modernity. Recently, this discourse of Othering and national stereotyping has gained fresh political virulence as a result of the rise of "Identity Politics". What is more, this newly politicized self/other discourse has affected Europe itself as that continent has been weathering a series of economic and political crises in recent years. The present volume traces the conjunction between cultural and literary traditions and contemporary ideologies during the crisis of European multilateralism. Contributors: Aelita Ambrulevičiūtė, Jürgen Barkhoff, Stefan Berger, Zrinka Blažević, Daniel Carey, Ana María Fraile, Wulf Kansteiner, Joep Leerssen, Hercules Millas, Zenonas Norkus, Aidan O'Malley, Raúl Sánchez Prieto, Karel Šima, Luc Van Doorslaer, Ruth Wodak"--

**Proceedings of the 33rd International MATADOR Conference** -

David R. Hayhurst 2012-12-06

by Conference Chairman n1 It is my pleasure to introduce this volume of Proceedings for the 33 MATADOR Conference. The Proceedings include 83 refereed papers submitted from 19 countries on 4 continents. 00 The spread of papers in this volume reflects four developments since the 32 MATADOR Conference in 1997: (i) the power of information technology to integrate the management and control of manufacturing systems; (ii) international manufacturing enterprises; (iii) the use of computers to integrate different aspects of manufacturing technology; and, (iv) new manufacturing technologies. New developments in the manufacturing systems area are globalisation and the use of the Web to achieve virtual enterprises. In manufacturing technology the potential of the following processes is being realised: rapid proto typing, laser processing, high-speed machining, and high-speed machine tool design. And, at the same time in the area of controls and automation, the flexibility and integration ability of open architecture computer controllers are creating a wide range of opportunities for novel solutions. Up-to-date research results in these and other areas are presented in this volume. The Proceedings reflect the truly international nature of this Conference and the way in which original research results are both collected and disseminated. The volume does not, however, record the rich debate and extensive scientific discussion which took place during the Conference. I trust that you will find this volume to be a permanent record of some of the research carried out in the last two years; and.

**Market Leader** - 2011

*Autonomous Driving* - Markus Maurer 2016-05-21

This book takes a look at fully automated, autonomous vehicles and

discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of "autonomous driving".
