Chemistry, Student Study Guide - James E. Brady 2008-01-28

The image on the front cover depicts a carbon nanotube emerging from a glowing plasma of hydrogen and carbon, as it forms around particles of a metal catalyst. Carbon nanotubes are a recently discovered allotrope of carbon. Three other allotropes of carbon-buckyballs, graphite, and diamond-are illustrated at the left, as is the molecule methane, CH₄, from which nanotubes and buckyballs can be made. The element carbon forms an amazing number of compounds with structures that follow from simple methane, found in natural gas, to the complex macromolecules that serve as the basis of life on our planet. The study of chemistry also follows from the simple to the more complex, and the strength of this text is that it enables students with varied backgrounds to proceed together to significant levels of achievement. *Materials Thermochemistry* - O. Kubaschewski 1993

Materials Thermochemistry, the 6th Edition of *Metallurgical Thermochemistry*, aims to demonstrate the central role of thermochemistry in the understanding and designing of materials and materials processes. Extensively revised and up-dated, the 6th Edition of this classic work includes all the latest developments in experimental methods, new methods for estimating thermochemical data for both pure and alloy substances, new practical applications of thermochemical calculations, and up-dated tables of critically evaluated thermochemical data for inorganic substances and binary alloy systems. The basic principles of chemical thermodynamics are presented in a straightforward way with many examples of the

use of thermochemical calculations in solving a variety of materials' problems. Although thermodynamics is an established field, this 6th Edition presents the newest experimental methods and calculations of complex equilibria associated with the most recent materials and environmental considerations (e.g. environmental pollution). This text is suitable for graduates and undergraduates alike and provides basic information necessary for researchers to apply thermochemical principles and data to the optimization of materials and materials processes.
