Fixed Point Theory in Probabilistic Metric Spaces -
O. Hadzic 2013-06-29
Fixed point theory in probabilistic metric spaces can be considered as a part of Probabilistic Analysis, which is a very dynamic area of mathematical research. A primary aim of this monograph is to stimulate interest among scientists and students in this fascinating field. The text is self-contained for a reader with a modest knowledge of the metric fixed point theory.

Several themes run through this book. The first is the theory of triangular norms (t-norms), which is closely related to fixed point theory in probabilistic metric spaces. Its recent development has had a strong influence upon the fixed point theory in probabilistic metric spaces. In Chapter 1 some basic properties of t-norms are presented and several special classes of t-norms are investigated.

Chapter 2 is an overview of some basic definitions and examples from the theory of probabilistic metric spaces. Chapters 3, 4, and 5 deal with some single-valued and multi-valued probabilistic versions of the Banach contraction principle. In Chapter 6, some basic results in locally convex topological vector spaces are used and applied to fixed point theory in vector spaces.

Audience: The book will be of value to graduate students, researchers, and applied mathematicians working in nonlinear analysis and probabilistic metric spaces.

A Tutorial on Elliptic PDE Solvers and Their

Parallelization - Craig C.

Douglas 2003-01-01

This compact yet thorough tutorial is the perfect introduction to the basic concepts of solving partial differential equations (PDEs) using parallel numerical methods. In just eight short chapters, the authors provide readers with enough basic knowledge of PDEs, discretization methods, solution techniques, parallel computers, parallel programming, and the run-time behavior of parallel algorithms to allow them to understand, develop, and implement parallel PDE solvers. Examples throughout the book are intentionally kept simple so that the parallelization strategies are not dominated by technical details.

Chromium and Chromium

Alloys - D. J. Maykuth 1966
Various alloying additions have been discovered which render unalloyed chromium much less susceptible to low-temperature embrittlement as well as to nitridation in air at elevated temperatures. These include additions of the Group IIIA metals, magnesia, and carbides based on the Groups IVA and VA metals. Of these additions, only the carbides contribute significantly to the hot strengthening of chromium. The combination of selected carbides and solid-solution-strengthening elements such as tungsten, molybdenum, and/or tantalum, has resulted in experimental alloys which retain useful strengths at temperatures through 1316 C (2400 F). These high strengths are achieved at some sacrifice in the low-temperature ductility of chromium. Also, despite the improvements afforded in the oxidation and nitridation resistance of chromium through alloying, no alloys are available which are capable of service in long-time exposures in air above 982 C

(1800 F) without suffering some property degradation.

Oxygen Manifesto - Atulya Misra 2019

Oxygen Manifesto is a story of the triumph of ordinary people over the might of the establishment in their battle to save the environment. Thatha lives in a remote and inaccessible part of Manipur and Ravi is a young IAS officer from the Tamil Nadu cadre. Circumstances bring them together and they create the most effective environmental movement the world has ever seen. They shun the politics of criticism and personal attacks and focus on establishing a new polity based on the principles of environmental protection, habitat conservation, direct civil action and democratic decentralization. Oxygen Manifesto is an engaging story about environmental

degradation and the impact of the Anthropocene. It exposes the myth around wealth creation and the paradigm of economic growth. It also plants a development narrative that is environment-centric-an idea which is considered fringe in today's times, but is bound to emerge as a mainstream thought in the future. The story also has an undercurrent of minimalism and veganism, as opposed to consumerism and wasteful consumption. A novel concept of taxing goods and services based on their carbon and water footprint has also been introduced by the writer. This is a must-read for anyone who cares about the future of human civilization.

Materials Handbook - François Cardarelli 2008-03-19
