Emphasis on QSEN competencies enables you to gain the knowledge, skills, and attitudes needed to provide safe, high-quality health care in a variety of high acuity, progressive, and critical care settings. Evidence-Based Practice boxes illustrate how research evidence is used to address problems in patient care and includes nursing implications plus AACN's new system for Levels of Evidence: A, B, C, D, E, and M. Universal Collaborative Plan of Care for the Critically Ill Patient addresses key aspects of collaborative/interprofessional care that apply to virtually all critically ill patients. Individual Plans of Care prepare you for clinical practice by describing patient problems, patient outcomes, and nursing assessments and interventions with rationales. Case studies challenge you to apply concepts to the real world, testing your clinical nursing judgment by asking questions about patient-specific cases with lab results. Clinical Alerts highlight potential problems and concerns to improve patient safety and clinical care. Laboratory Alerts emphasize the importance of laboratory test results to critical care nursing. Medication tables show the actions/usages, indications, dosages/routes, side effects, and nursing implications of medications commonly used in critical care settings. Coverage of cardiac assistive devices includes the ECMO device for extracorporeal life support, as well as other small, portable, bedside cardiac-assistive devices. Hemodynamic monitoring content now emphasizes the noninvasive methods of hemodynamic monitoring that are becoming more prominent. Coverage of infection control addresses the QSEN safety competency and helps provide patient protection against the growing threat of drug-resistant infections. Nearly 300 full-color photographs and drawings visually clarify key concepts and equipment for better understanding of today's complex critical care environment.

Design for Pediatric and Neonatal Critical Care - Mardelle McCuskey Shepley 2014-02-03

Design for Pediatric and Neonatal Critical Care provides an overview of the design and research issues associated with the development of environments for pediatric and neonatal intensive care. This is the first

and only book dedicated to this topic and was created to support individuals interested in developing and studying critical care environments for children and their families. In addition to a detailed analysis of the literature from research and practice, the author provides a summary of the historical development of critical care for infants and children, and information regarding the role of PICUs and NICUs in the critical care system. A discussion of current codes and future trends is also provided. Design for Pediatric and Neonatal Critical Care includes essays from prominent voices in the field ranging from inspired young architects and researchers to world-renowned healthcare design and research icons. Illustrations of work that has been identified as exemplary or representative of recent directions are included, which will help those planning new or remodeled projects to identify and examine precedents. This book is intended to help designers and researchers enhance healing environments for young patients in critical care settings and provide information in support of the families and staff who provide care for these children and infants.

The Comprehensive Respiratory Therapist Exam Review - E-Book - James R. Sills 2009-12-28

Prepare for success on respiratory therapy credentialing exams! Updated to reflect the 2009 National Board of Respiratory Care (NBRC) content outlines, Sills' The Comprehensive Respiratory Therapist's Exam Review, 5th Edition helps you review for both entry and advanced level credentialing exams. It covers every testable subject, providing content review, self-assessment questions, and study hints. This title includes additional digital media when purchased in print format. For this digital book edition, media content is not included. Unique! Exam Hint boxes point out subjects that are frequently tested, helping you study, plan your time, and improve your test-taking skills. Self-study questions are included at the end of each chapter, accompanied by answers and rationales in the back of the book. Complexity level codes (recall, application, and analysis) help you prepare for questions in the way that is most appropriate (e.g., memorization for recall or synthesis for analysis). NBRC content outline coding provides a code for each topic so you can be sure that you have covered every topic that might appear on the exam. CRT and RRT level codes speed your review by identifying the individual topics for the CRT and RRT exams, as well as topics for both. One text now covers both the entry and advanced levels of Respiratory Therapists credentialing exams, so you need only one book to prepare for CRT and RRT credentials. Updated content reflects the NBRC's new examination content outlines, so you get an accurate, current review. New coverage includes subject areas such as CPAP/BiPAP titration during sleep, hemodynamic monitoring, hyperinflation therapy, laryngeal mask airway, high frequency ventilation, oxygen titration, thoracentesis, ultrasound, and ventilator-associated pneumonia protocols.

Respiratory Care Anatomy and Physiology - Will Beachey, PhD, RRT, FAARC 2012-10-22

Perfect for both practicing therapists and students in respiratory therapy and associated professions, this well-organized text offers the most clinically relevant and up-to-date information on respiratory applied anatomy and physiology. Content spans the areas of basic anatomy and physiology of the pulmonary, cardiovascular, and renal systems, and details the physiological principles underlying common therapeutic, diagnostic, and monitoring therapies and procedures. Using a clear and easy-to-understand format, this text helps you take a more clinical perspective and learn to think more critically about the subject matter. Open-ended concept questions require reasoned responses based on thorough comprehension of the text, fostering critical thinking and discussion. Clinical Focus boxes throughout the text place key subject matter in a clinical context to connect theory with practice. Chapter outlines, chapter objectives, key terms, and a bulleted chapter summary highlight important concepts and make content more accessible. Appendixes contain helpful tables and definitions of terms and symbols. NEW! Chapter on the physiological basis for treating sleep-disordered breathing clarifies the physiological mechanisms of sleep-disordered breathing and the various techniques required to treat this type of disorder. NEW! Reorganization of content places the section on the renal system before the section on integrated responses in exercise and aging to create a more logical flow of content. NEW! More Clinical Focus scenarios and concept questions provide additional opportunities to build upon content previously learned and to apply new information in the text.
