The Loneliest Polar Bear - Kale Williams 2021-03-23

"A moving story of abandonment, love, and survival against the odds."—Dr. Jane Goodall The heartbreaking and ultimately hopeful story of an abandoned polar bear cub named Nora and the humans working tirelessly to save her and her species, whose uncertain future in the accelerating climate crisis is closely tied to our own Six days after giving birth, a polar bear named Aurora got up and walked away from her den at the Columbus Zoo, leaving her tiny squealing cub to fend for herself. Hours later, Aurora still hadn't returned. The cub was furless and blind, and with her temperature dropping dangerously, the zookeepers entrusted with her care felt they had no choice: They would have to raise one of the most dangerous predators in the world by hand. Over the next few weeks, a group of veterinarians and zookeepers worked around the clock to save the cub, whom they called Nora. Humans rarely get as close to a polar bear as Nora's keepers got to their fuzzy charge. But the two species have long been intertwined. Three decades before Nora's birth, her father, Nanuq, was orphaned when an Inupiat hunter killed his mother, leaving Nanuq to be sent to a zoo. That hunter, Gene Agnaboogok, now faces some of the same threats as the wild bears near his Alaskan village of Wales, on the westernmost tip of the North American continent. As sea ice diminishes and temperatures creep up year after year, Agnaboogok and the polar bears—and everyone and everything else living in the far north—are being forced to adapt. Not all of them will succeed. Sweeping and tender, *The Loneliest Polar Bear* explores the fraught relationship humans have with the natural world, the exploitative and sinister causes of the environmental mess we find ourselves in, and how the fate of polar bears is not theirs alone.

Salvadoran Imaginaries - Cecilia M. Rivas 2014-03-31

Ravaged by civil war throughout the 1980s and 1990s, El Salvador has now emerged as a study in contradictions. It is a country where urban call centers and shopping malls exist alongside rural poverty. It is a land now at peace but still grappling with a legacy of violence. It is a place marked by deep social divides, yet offering a surprising abundance of inclusive spaces. Above all, it is a nation without borders, as widespread emigration during the war has led Salvadorans to develop a truly transnational sense of identity. In *Salvadoran Imaginaries*, Cecilia M. Rivas takes us on a journey through twenty-first century El Salvador and to the diverse range of sites where the nation's postwar identity is being forged. Combining field ethnography with media research, Rivas deftly toggles between the physical spaces where the new El Salvador is starting to emerge and the virtual spaces where Salvadoran identity is being imagined, including newspapers, literature, and digital media. This interdisciplinary approach enables her to explore the multitude of ways that Salvadorans negotiate between reality and representation, between local neighborhoods and transnational imagined communities, between present conditions and dreams for the future. Everyday life in El Salvador may seem like a simple matter, but Rivas digs deeper, across many

different layers of society, revealing a wealth of complex feelings that the nation's citizens have about power, opportunity, safety, migration, and community. Filled with first-hand interviews and unique archival research, Salvadoran Imaginaries offers a fresh take on an emerging nation and its people.

Republic of Latvia - International Monetary Fund. European Dept. 2019-08-07

This Selected Issues paper analyses the implications of global value chains (GVC) participation for Latvia's competitiveness and exposure to risks. Using a structural model, it assesses Latvia's competitiveness through different real effective exchange rate (REER) measures and examines the main factors behind differences in the measures. Based on this analysis, the paper suggests policy options to strengthen Latvia's competitiveness. The paper also estimates the impact of an appreciation of the GVC related REER measure on value added export growth and real GDP growth, and finds sizable effects, suggesting that a rapid labor market tightening could lead to erosion in competitiveness and reduction in growth. Finally, trade tension induced tariff hikes may have significant cost for Latvia, especially in terms of value added produced in the country. Trade tension induced tariff hikes are likely to have moderate costs for Latvia in terms of value added produced in the country. In this regard, policies aimed at enhancing product sophistication or quality and export market diversification could mitigate Latvia's exposure to trade shocks in GVCs.

Irishness and Womanhood in Nineteenth-century British Writing - Thomas J. Tracy 2009

Using Lady Morgan's *The Wild Irish Girl* as his point of departure, Thomas J. Tracy argues that nineteenth-century debates over what constitutes British national identity often revolved around representations of Irishness, especially Irish womanhood. He maps the genealogy of this development in fiction, political discourse, and the popular press, from Edgeworth's *Castle Rackrent* through Trollope's Irish novels, focusing on the pivotal period from 1806 through the 1870s.

Refinement of Production Engines and New Control Strategies - Jay Meldrum 2017-03-01

This collection is a resource for studying the history of the evolving technologies that have contributed to snowmobiles becoming cleaner and quieter machines. Papers address design for a snowmobile using the EPA test procedure and standard for off-road vehicles, along with more stringent U.S. National Park Best Available Technology (BAT) standards that are likened to those of the California Air Resources Board (CARB). Innovative technology solutions include: • Standard application for diesel engine designs • Applications to address and test both engine and track noise • Benefits of the Miller cycle and turbocharging The SAE International Clean Snowmobile Challenge (CSC) program is an engineering design competition. The program provides undergraduate and graduate students the opportunity to enhance their engineering design and project management skills by reengineering a snowmobile to reduce emissions and noise. The competition includes internal combustion engine categories that address both gasoline and diesel, as well as the zero emissions category in which range and draw bar performance are measured. The goal of the competition is designing a cleaner and quieter snowmobile. The competitors' modified snowmobiles are also expected to be cost-effective and comfortable for the operator to drive.

Did Guru Sukracharya cheat him? Did he find true love? Is Mahabali still alive? Will he come again to regain his throne as the Emperor of the three worlds?

Windows into the Earth - Robert B. Smith 2000-05-25

Millions of years ago, the North American continent was dragged over the world's largest continental hotspot, a huge column of hot and molten rock rising from the Earth's interior that traced a 50-mile wide, 500-mile-long path northeastward across Idaho. Generating cataclysmic volcanic eruptions and large earthquakes, the hotspot helped lift the Yellowstone Plateau to more than 7,000 feet and pushed the northern Rockies to new heights, forming unusually large glaciers to carve the landscape. It also created the jewel of the U.S. national park system: Yellowstone. Meanwhile, forces stretching apart the western U.S. created the mountainous glory of Grand Teton National Park. These two parks, with their majestic mountains, dazzling geysers, and picturesque hot springs, are windows into the Earth's interior, revealing the violent power of the dynamic processes within. Smith and Siegel offer expert guidance through this awe-inspiring terrain, bringing to life the grandeur of these geologic phenomena as they reveal the forces that have shaped--and continue to shape--the greater Yellowstone-Teton region. Over seventy illustrations--including fifty-two in full color--illuminate the breathtaking beauty of the landscape, while two final chapters provide driving tours of the parks to help visitors enjoy and understand the regions wonders. Fascinating and informative, this book affords us a striking new perspective on Earth's creative forces.

Motorized Obsessions - Paul R. Josephson 2007-09-02

2008 Outstanding Academic Title, Choice Magazine From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

The Proliferation Puzzle - Zachary S. Davis 2020-12-01

Originally published in 1993, this volume was unique in its scope and approach: Unlike most literature on nuclear weapons proliferation at the time, the essays in this volume offer theoretical discussions and suggest testable hypotheses about the causes and effects of nuclear weapons proliferation. The proliferation of nuclear weapons is an ideal subject for social science scholarship, and such scholarship is especially timely now. Among the topics discussed in The Proliferation Puzzle are: The building of nuclear weapons is a complex task touching upon many of the subjects of study at the core of social science and international relations. Nuclear weapons may be acquired as a hedge against external threat, for reasons of national prestige, or as a result of pressures by domestic coalitions among scientists, bureaucrats, and the military. They may be sought for defensive purposes or to support hegemonic aspirations. Nuclear weapons also raise questions about civilian command and control, especially in crisis situations. During the last two decades the acquisition of nuclear weapons has been proscribed by the non-proliferation regime. The decisions countries made about acquiring these weapons and the manner they chose to build them serve as a test of the efficacy of this particular regime, and of international regimes more generally. Nuclear weapons were introduced at the time bipolarity became the international order. As the world moves away from bipolarity, there is a need to answer questions such as: What would be the effect of nuclear weapons in a multipolar order? How will the spread of nuclear weapons affect the distribution of capabilities among

states? If nuclear weapons spread to additional countries, will they enhance stability or exacerbate instability? Can the spread of these weapons be managed or controlled? This book brings together scholars from different schools within international relations and the social sciences to address the question of why nuclear weapons spread. A disciplined, rigorous examination of proliferation is important not only for scholarship but also for informed policymaking. The purpose of social science is to formulate hypotheses and devise theories that advance our understanding of society and aid in the fashioning of enlightened policy. The essays in this volume show how explicit hypotheses about the causes and consequences of nuclear weapons proliferation provide a deeper understanding of the problem and suggest specific, theory-informed policy recommendations.

Aboriginal Food Security in Northern Canada: An Assessment of the State of Knowledge - Council of Canadian Academies 2014-03-27

Food insecurity presents a serious and growing challenge in Canada's northern and remote Aboriginal communities. In 2011, off-reserve Aboriginal households in Canada were about twice as likely as other Canadian households to be food insecure. Finding lasting solutions will require the involvement not just of policy-makers but of those most affected by food insecurity: people living in the North. In recognition of this problem, the Minister of Health, on behalf of Health Canada, asked the Council of Canadian Academies to appoint an expert panel to assess the knowledge of the factors influencing food security in the Canadian North and of the health implications of food insecurity for northern Aboriginal populations. The Expert Panel on the State of Knowledge of Food Security in Northern Canada found that food insecurity among northern Aboriginal peoples requires urgent attention in order to mitigate impacts on health and well-being. Aboriginal Food Security in Northern Canada: An Assessment of the State of Knowledge offers policy-makers a holistic starting-point for discussion and problem-solving. It also provides evidence and options to researchers and communities engaging in local responses.
