He hides when the elephant-object of his affection is around. He writes dozens of letters that he will never send. And he tries to be healthy, but ends up finishing

the cheesecake. This soulful book is at once relatable and revealing, a reminder that love is worth striving for, and that the very best things in life will come to those who wait. Plus, this is the fixed format version, which looks almost identical to the print edition.

2016-07-05

"A generous, poignant memoir" of loss, family secrets, and a quest to shape something beautiful out of the chaos of nature (Kirkus Reviews). Just as Alex and her husband buy a house in Toronto, set atop an acre of wilderness that extends into a natural gorge in the middle of the city, she learns that her father, a Ukrainian-born immigrant, has died. Her new home's gigantic, abandoned garden, choked with weeds and crumbling antique structures, resembles a wild jungle—and it stirs cherished memories of Alex's

childhood: When her home life became unbearable, she would escape to the forest. In her new home, Alex can feel the power of the majestic trees that nurtured her in her youth, but as she begins to beat back the bushes to unveil the garden's mysteries, her mother has a stroke and develops dementia. When Alex discovers an envelope of yellowed documents while sorting through her father's junk pile, offering clues to her parents' mysterious past, she reluctantly musters the courage to uncover their secrets. While discovering the plants hidden in the garden—from primroses and maple syrup-producing sugar maples to her mother's favorite, lily of the valley—she must come to terms with the circle of life around her, and find the courage to tend to her own family's future. "The land is rife with unexpected delights: a huge, decaying pagoda, underground aquifers, a pond, koi, deer, and all manner of vegetation. . . . As she restores the property and

heals her long-troubled soul, Risen paints a vivid and exquisite portrait of nature and its profound significance."

Glenn J. Myatt 2009-03-04

A hands-on guide to making valuable decisions from data using advanced data mining methods and techniques This second installment in the Making Sense of Data series continues to explore a diverse range of commonly used approaches to making and communicating decisions from data. Delving into more technical topics, this book equips readers with advanced data mining methods that are needed to successfully translate raw data into smart decisions across various fields of research including business, engineering, finance, and the social sciences. Following a comprehensive introduction that details how to define a problem, perform an analysis, and deploy the results, Making Sense of Data II addresses the following key techniques for advanced data analysis: Data Visualization reviews principles and methods for understanding and communicating data through the use of visualization including single variables, the relationship between two or

more variables, groupings in data, and dynamic approaches to interacting with data through graphical user interfaces. Clustering outlines common approaches to clustering data sets and provides detailed explanations of methods for determining the distance between observations and procedures for clustering observations. Agglomerative hierarchical clustering, partitioned-based clustering, and fuzzy clustering are also discussed. Predictive Analytics presents a discussion on how to build and assess models, along with a series of predictive analytics that can be used in a variety of situations including principal component analysis, multiple linear regression, discriminate analysis, logistic regression, and Naïve Bayes. Applications demonstrates the current uses of data mining across a wide range of industries and features case studies that illustrate the related applications in real-world scenarios. Each method is discussed within the context of a data mining process

including defining the problem and deploying the results, and readers are provided with guidance on when and how each method should be used. The related Web site for the series (www.makingsenseofdata.com) provides a hands-on data analysis and data mining experience. Readers wishing to gain more practical experience will benefit from the tutorial section of the book in conjunction with the Traceis™ software, which is freely available online. With its comprehensive collection of advanced data mining methods coupled with tutorials for applications in a range of fields, *Making Sense of Data II* is an indispensable book for courses on data analysis and data mining at the upper-undergraduate and graduate levels. It also serves as a valuable reference for researchers and professionals who are interested in learning how to accomplish effective decision making from data and understanding if data analysis and data mining methods could

help their organization.

Alone Against the North - Adam Shoalts 2015-10-06

Winner of the Legislative Assembly of Ontario's 2016 Young Authors Award Winner of the 2017 Louise de Kiriline Award for Nonfiction The age of exploration is not over. When Adam Shoalts ventured into the largest unexplored wilderness on the planet, he hoped to set foot where no one had ever gone before. What he discovered surprised even him. Shoalts was no stranger to the wilderness. He had hacked his way through jungles and swamp, had stared down polar bears and climbed mountains. But one spot on the map called out to him irresistibly: the Hudson Bay Lowlands, a trackless expanse of muskeg and lonely rivers, caribou and wolf—an Amazon of the north, parts of which to this day remain unexplored. Cutting through this forbidding landscape is a river no explorer, trapper, or canoeist

had left any record of paddling. It was this river that Shoalts was obsessively determined to explore. It took him several attempts, and years of research. But finally, alone, he found the headwaters of the mysterious river. He believed he had discovered what he had set out to find. But the adventure had just begun. Unexpected dangers awaited him downstream. Gripping and often poetic, *Alone Against the North* is a classic adventure story of single-minded obsession, physical hardship, and the restless sense of wonder that every explorer has in common. But what does exploration mean in an age when satellite imagery of even the remotest corner of the planet is available to anyone with a phone? Is there anything left to explore? What Shoalts discovered as he paddled downriver was a series of unmapped waterfalls that could easily have killed him. Just as astonishing was the media reaction when he got back to civilization. He was crowned "Canada's Indiana Jones" and

appeared on morning television. He was feted by the Royal Canadian Geographical Society and congratulated by the Governor General. People were enthralled by Shoalts's proof that the world is bigger than we think. Shoalts's story makes it clear that the world can become known only by getting out of our cars and armchairs, and setting out into the unknown, where every step is different from the one before, and something you may never have imagined lies around the next curve in the river.

Passenger Rail Franchising - Great Britain. Parliament. House of Commons. Transport Committee 2006

It is thirteen years since the Railways Act 1993 started the process of privatising British Rail, replacing it with one company owning and managing the infrastructure, an open-access system for freight services and a series of twenty-five passenger franchises let to private companies for a specified period of time. This period has seen almost continuous change, and there is now a new 'triumvirate' framework with the Department for Transport, the Office of Rail Regulation and Network Rail in place, with the third generation of franchises in the process of being let and the number being reduced to nineteen. The Committee's report examines the current franchising system, focusing on the coherence of its objectives,

the effectiveness of the process for awarding franchises and the management of franchise agreements, and whether more competition and vertical integration is needed. Findings include that the current system represents a policy muddle which lacks a coherent framework for the development of good services and delivery of value for money for passengers and taxpayers. The only way the Government can increase capacity and improve services for the long-term is to drop the dogmatic pursuit of competition in its decision-making as to what the private and public sectors can and should do in future. The Government's forthcoming long-term strategy for the railways will need to address these issues, and to set out a structure and a strategy capable of securing quality passenger rail services to meet demand over the next half a century.

Whether the subject is a one-man chimney demolition, the lifelong fidelity of seahorses, a lover at war in Afghanistan or a kickboxing match, Lahey confronts the enduring disconnect between the sexes in a language that is slangy and quick, punctuated with jabs. She eyes those moments—in a day, in a life—when the normal clues we rely on disappear, shifting the line between domesticity and danger. In *Spinning Side Kick*, a talented poet returns with sharper aim.

A History of China - Wolfram Eberhard 2016-10-28
Until recently we were dependent for the beginnings of Chinese history on the written Chinese tradition. According to these sources China's history began either about 4000 B.C. or about 2700

B.C. with a succession of wise emperors who "invented" the elements of a civilization, such as clothing, the preparation of food, marriage, and a state system; they instructed their people in these things, and so brought China, as early as in the third millennium B.C., to an astonishingly high cultural level. However, all we know of the origin of civilizations makes this of itself entirely improbable; no other civilization in the world originated in any such way. As time went on, Chinese historians found more and more to say about primeval times. All these narratives were collected in the great imperial history that appeared at the beginning of the Manchu epoch. That book was translated into French, and all the works written in Western languages until recent years on Chinese history and civilization have been based in the last resort on that translation.

Drilling Engineering Problems and Solutions - M. E. Hossain
2018-06-19

Petroleum and natural gas still

remain the single biggest resource for energy on earth. Even as alternative and renewable sources are developed, petroleum and natural gas continue to be, by far, the most used and, if engineered properly, the most cost-effective and efficient, source of energy on the planet. Drilling engineering is one of the most important links in the energy chain, being, after all, the science of getting the resources out of the ground for processing. Without drilling engineering, there would be no gasoline, jet fuel, and the myriad of other "have to have" products that people use all over the world every day. Following up on their previous books, also available from Wiley-Scrivener, the authors, two of the most well-respected, prolific, and progressive drilling engineers in the industry, offer this groundbreaking volume. They cover the basic tenets of drilling engineering, the most common problems that the drilling engineer faces day to day, and cutting-edge new

technology and processes through their unique lens. Written to reflect the new, changing world that we live in, this fascinating new volume offers a treasure of knowledge for the veteran engineer, new hire, or student. This book is an excellent resource for petroleum engineering students, reservoir engineers, supervisors & managers, researchers and environmental engineers for planning every aspect of rig operations in the most sustainable, environmentally responsible manner, using the most up-to-date technological advancements in equipment and processes.
