## **Socio-Political Order and Security in the Arab World** - Andreas Krieg 2017-03-27

This book examines the connection between socio-politics and security in the Arab World. In an effort to understand the social and political developments that have been on-going in the Arab World since the 1990s, culminating in the Arab Spring, Krieg moves beyond liberal deterministic assumptions - most notably that the promotion of liberal values and democracy are the panacea for the structural problems of the region. Instead, this text advances the case that grievances related to individual security needs are at the heart of regional insecurity and instability. Looking towards the future, the author asserts that regimes can only be resilient if they are able to provide for individual security inclusively. When regimes fail to cater for public security, they might be replaced by alternative non-state security providers.

**Strategies to Improve Cardiac Arrest Survival** - Institute of Medicine 2015-09-29

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. *Strategies to Improve Cardiac Arrest Survival* examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of *Strategies to Improve Cardiac Arrest Survival* provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

The Wars for Asia, 1911-1949 - S. C. M. Paine 2012-08-20

The Wars for Asia, 1911-1949 shows that the Western treatment of World War II, the Second Sino-Japanese War and the Chinese Civil War as separate events misrepresents their overlapping connections and causes. The Chinese Civil War precipitated a long regional war between China and Japan that went global in 1941 when the Chinese found themselves fighting a civil war within a regional war within an overarching global war. The global war that consumed Western attentions resulted from Japan's peripheral strategy to cut foreign aid to China by attacking Pearl Harbour and Western interests throughout the Pacific in 1941. S. C. M. Paine emphasizes the fears and ambitions of Japan, China and Russia, and the pivotal decisions that set them on a collision course in the 1920s and 1930s. The resulting wars together yielded a viscerally anti-Japanese and unified Communist China, the still-angry rising power of the early twenty-first century.

ACLS for EMTs - Michael Gordon Smith 2012-07-30

EMTs can find themselves in critical situations that require advanced cardiac life support (ACLS). Although EMTs are not trained to provide advanced-level skills, there is much they can do to improve the quality of management, and thus the patient's chance for survival by understanding ACLS and facilitating its administration by ALS providers. Teamwork is the cornerstone of ACLS care. Advanced life support can only function on a foundation of solid, ongoing basic life support practices. As such, an understanding of the principles of advanced life support will enhance the ability of EMTs to work in collaboration to increase the survival rates of patients. Most importantly, better teamwork will improve care not only during cardiac arrests, but also during all emergency calls.

*Darkness before Daybreak* - Hans Lucht 2011-12-26

This riveting book chronicles the lives of a group of fishermen from Ghana who took the long and dangerous journey to Southern Italy in search of work in a cutthroat underground economy. A story that illuminates the nature of high-risk migration around the world, *Darkness before Daybreak* reveals the challenges and experiences of these international migrants who, like countless others, are often in the news but are rarely understood. Hans Lucht tells how these men live on the fringes of society in Naples, what the often deadly journey across the Sahara Desert and Mediterranean Sea involved, and what their lives in the fishing village of Senya Beraku—where there are no more fish—were like. Asking how these men find meaning in their experiences, Lucht addresses broader existential questions surrounding the lives of economic refugees and their death-defying struggle for a life worth living. He also considers the ramifications of the many deaths that occur in the desert and the sea for those who are left behind.
