Readings in Human-Computer Interaction -
Ronald M. Baecker 2014-06-28

The effectiveness of the user-computer interface
has become increasingly important as computer
systems have become useful tools for persons
not trained in computer science. In fact, the
interface is often the most important factor in
the success or failure of any computer system.
Dealing with the numerous subtly interrelated

issues and technical, behavioral, and aesthetic considerations consumes a large and increasing share of development time and a corresponding percentage of the total code for any given application. A revision of one of the most successful books on human-computer interaction, this compilation gives students, researchers, and practitioners an overview of the significant concepts and results in the field and a comprehensive guide to the research literature. Like the first edition, this book combines reprints of key research papers and case studies with synthesizing survey material and analysis by the editors. It is significantly reorganized, updated, and enhanced; over 90% of the papers are new. An invaluable resource for systems designers, cognitive scientists, computer scientists, managers, and anyone concerned with the effectiveness of user-computer interfaces, it is also designed for use as a primary or supplementary text for graduate and advanced undergraduate courses in human-

computer interaction and interface design. Human computer interaction--historical, intellectual, and social Developing interactive systems, including design, evaluation methods, and development tools The interaction experience, through a variety of sensory modalities including vision, touch, gesture, audition, speech, and language Theories of information processing and issues of human-computer fit and adaptation

Dutch Paintings of the Seventeenth Century - National Gallery of Art (U.S.) 1995
From the hardships of a long and arduous war with Spain, the seventeenth-century Dutch seem to have drawn strength and expressed pride in their unique social and cultural heritage, especially in their art. Arthur K. Wheelock Jr., the Gallery's curator of northern Baroque painting, has carefully studied the Gallery's collection by masters of the Golden Age of Dutch art--notably Cuyp, De Hooch, Rembrandt, Ruisdael, and Vermeer. The twenty-three paintings by Rembrandt and his school are elucidated by an essay on the question of

attribution, while an appendix of artists' signatures amplifies and supports the author's wide-ranging discussions of this remarkably cohesive collection.
