Communication Sciences and Disorders - Dale F. Williams 2017-09-25

Few activities can match the complexity of human communication. Given its intricacy, it is understandable that the process will not always work properly. When it doesn't, the effects can be devastating, given how much of everyday life depends on communicating with one another. Despite its importance, however, much is still unclear about how we turn thoughts into language and then speech. Debates rage over various components of the communication system. Myths abound, most based on nothing more than speculation and misinformation. It all makes for a fascinating area of study and practice, particularly when considering the importance of the topic. This book provides readers with the basics of human communication without shying away from the controversies. Dale F. Williams, Ph.D. utilizes a panel of internationally recognized experts in all areas of the field to clearly explain normal communication as well as disorders of speech, language, hearing, and swallowing. Topics that overlap all disorders—diagnosis, treatment, research,

ethics, work settings, and multicultural issues—are also covered in a reader-friendly style. In addition to the relevant information on human communication, the book also includes first-hand accounts of both people with disorders and those who work with them. Discussion questions are posed to help readers explore the gray areas and additional readings are described for those wishing to research specific topics. In these ways, readers are provided with information that truly helps them to understand communication sciences and disorders from a variety of perspectives. Communication Sciences and Disorders: An Introduction to the Professions is essential reading for anyone contemplating a career in speech-language pathology or audiology. In addition, the clear and entertaining writing style makes the field, in all its complexity, accessible to anyone with even a passing interest in the process of human communication.

Communication and Swallowing Changes in Healthy Aging Adults - Angela N. Burda 2010-10-22

Communication and Swallow Changes in Healthy Aging Adults compiles and presents the available research on healthy aging adults' performance and abilities in the following areas: auditory comprehension, reading comprehension, speaking, writing, voice and motor speech abilities, cognition, and swallowing. This text also presents principles from the World Health Organization's International Classification of Functioning, Disability and Health and its applications to aging adults. One of the first texts to cover these principles, this book will address the need for a comprehensive view of communication and swallow issues

in aging for students of speech-language pathology. Speech-language pathologist students will learn how to fully compare what would be considered normal for their elderly patients rather than overestimating or underestimating what aging adults are capable of doing. Knowing what would be considered within the spectrum of normal, will help speech-language pathologists to address therapy as effectively as possible. Having this information at hand is particularly important as the nation's population is aging at a rapid rate and there is a need for evidence-based practice in speech-language pathology. Written in an easy to follow format, *Communication and Swallow Changes in Healthy Aging Adults* includes original research data, discussion questions and a list of Quick Facts at the end of each chapter to summarize key points. This text will serve as a useful resource as students see elderly clients in on-campus speech and hearing clinics and when they intern at hospitals and long-term care facilities. Instructor Resources: PowerPoint Slides and an Image Bank Testimonial: "Communication and Swallowing Changes in Healthy Aging Adults is a handy text, portable, and logically organized. The information is easy to follow complimented by information presented in tables/charts. This text would be helpful to a practicing therapist when making a differential diagnosis between a normal vs. atypical aging process. Communication and Swallowing Changes in Healthy Aging Adults would be an appropriate text for courses in Communications Disorders Departments for graduate students in a neuro course or a neurogenic communication disorders course, and in lifespan development courses as in the field of Psychology and Gerontology." ~ Susan Durnford, M.S., CCC-SLP, Clinical Assistant Professor, Department of Speech-Language Pathology & Audiology, Ithaca College
