This must-read for lovers of Stephen King's *The Shining* will leave readers breathless as Seda and her family find themselves at the mercy of a murderer in an isolated and snowbound hotel. Get ready for what Kirkus calls "A bloody, wonderfully creepy scare ride." When her mom inherits an old, crumbling mansion, Seda's

almost excited to spend the summer there. The grounds are beautiful and it's fun to explore the sprawling house with its creepy rooms and secret passages. Except now her mom wants to renovate, rather than sell the estate—which means they're not going back to the city...or Seda's friends and school. As the days grow shorter, Seda is filled with dread. They're about to be cut off from the outside world, and she's not sure she can handle the solitude or the darkness it brings out in her. Then a group of teens get stranded near the mansion during a blizzard. Seda has no choice but to offer them shelter, even though she knows danger lurks in the dilapidated mansion—and in herself. And as the snow continues to fall, what Seda fears most is about to become her reality...

Kiss Carlo - Adriana Trigiani 2017-08-10
From the beloved bestselling author of *The Shoemaker's Wife* comes an exhilarating novel of friendship, family, love and loyalty. It's 1949 and South Philadelphia is bursting with possibility. The arrival of an urgent telegram from Italy upends the life of Nicky Castone, a young man who, orphaned as a child, now lives with his Uncle Dom and his large and boisterous family in the city. Surely there is more to life than this, despite a steady job in the family business and a

sweet-natured fiancée? In secret, Nicky begins moonlighting at the local Shakespeare theatre company and is quickly drawn to the stage, its colourful players... and to feisty Calla Borelli, who runs the show. Before long he finds himself on the horns of a dilemma: can he return to the conventional life his family expects of him? Or does he have what it takes to chart a new course and risk losing everything he cherishes? Told against the backdrop of some of Shakespeare's greatest comedies, this epic novel brims with romance as long-buried secrets are revealed, mistaken identities are unmasked, scores are settled, broken hearts are mended and true love reigns. Kiss Carlo is a jubilee, resplendent with hope, love and the abiding power of la famiglia.

~~*Readers love Adriana Trigiani!*~*~*

'[Adriana Trigiani] has crafted a world of warm, lively characters whose charming idiosyncrasies lead them to collide and ricochet along the way to love. A delightfully sprawling comedy' Kirkus Reviews on Kiss Carlo 'A rich, sweeping epic... If

you're meeting her work for the first time, get ready for a lifelong love affair. Splendid' Kathryn Stockett, author of The Help on The Shoemaker's Wife 'The breathtaking historical novel sparkles in exquisite details and vivid descriptions' Huffington Post on The Shoemaker's Wife 'A tender tale of being torn between family, career and love' -- Company on Lucia, Lucia 'The author of BIG STONE GAP triumphs again' -- Heat on Lucia, Lucia [Blade-Mounted Trailing Edge Flap Control for Bvi Noise Reduction](#) - National Aeronautics and Space Administration (NASA) 2018-07-23 Numerical procedures based on the 2-D and 3-D full potential equations and the 2-D Navier-Stokes equations were developed to study the effects of leading and trailing edge flap motions on the aerodynamics of parallel airfoil-vortex interactions and on the aerodynamics and acoustics of the more general self-generated rotor blade vortex interactions (BVI). For subcritical interactions, the 2-D results indicate

that the trailing edge flap can be used to alleviate the impulsive loads experienced by the airfoil. For supercritical interactions, the results show the necessity of using a leading edge flap, rather than a trailing edge flap, to alleviate the interaction. Results for various time dependent flap motions and their effect on the predicted temporal sectional loads, differential pressures, and the free vortex trajectories are presented. For the OLS model rotor, contours of a BVI noise metric were used to quantify the effects of the trailing edge flap on the size and directivity of the high/low intensity noise region(s). Average reductions in the BVI noise levels on the order of 5 dB with moderate power penalties on the order of 18 pct. for a four bladed rotor and 58 pct. for a two bladed rotor were obtained.
