The Anarchist Cookbook - William Powell 2018-03-11

The Anarchist Cookbook will shock, it will disturb, it will provoke. It places in historical perspective an era when "Turn on, Burn down, Blow up" are revolutionary slogans of the day. Says the author "This book... is not written for the members of fringe political groups, such as the Weatherman, or The Minutemen. Those radical groups don't need this book. They already know everything that's in here. If the real people of America, the silent majority, are going to survive, they must educate themselves. That is the purpose of this book." In what the author considers a survival guide, there is explicit information on the uses and effects of drugs, ranging from pot to heroin to peanuts. There i detailed advice concerning electronics, sabotage, and surveillance, with data on everything from bugs to scramblers. There is a comprehensive chapter on natural, non-lethal, and lethal weapons, running the gamut from cattle prods to sub-machine guns to bows and arrows.

**E-learning and Disability in Higher Education** - Jane K. Seale 2013-10-08

Most people working within the higher education sector understand the importance of making e-learning accessible to students with disabilities, yet it is not always clear exactly how this should be accomplished. E-Learning and Disability in Higher Education evaluates current accessibility practice and critiques the extent to which 'best' practices can be confidently identified and disseminated. This second edition has been fully updated and includes a focus on research that seeks to give 'voice' to disabled students in a way that provides an indispensable insight into their relationship with technologies and the institutions in which they study. Examining the social, educational, and political background behind making online learning accessible in higher and further education, E-Learning and Disability in Higher Education considers the roles and perspectives of the key stake-holders involved in e-learning: lecturers, professors, instructional designers, learning technologists, student support services, staff developers, and senior managers and administrators.

Emessaging and the Physician/Patient Dynamic - Susan M Wieczorek 2019-12-12

Ten years after the adoption of the HITECH Act of 2009, eMessaging and the Physician/Patient Dynamic: Practices in Transition examines the complex, interlocking forces at play when mandates for electronic health records (EHRs) and electronic messaging within secured health portals forced an unprecedented transformation of the healthcare environment. Technological, sociological, medical, economic, political, governmental, legal, and communication issues converged, forever altering the "medicological environment," a space within which health professionals and patients alike strive towards efficacious, satisfying transactions that lead to improved health. Susan M. Wieczorek's analysis discusses the layers of policies and regulations that thrust healthcare users--often unwillingly--into the newly required practice of online communication between physicians and patients. Wieczorek also compares and contrasts rural and urban early adoption practices through the use of surveys, critical incident reports, and oral histories and anticipates future trends in data mining of electronic messaging by demonstrating a content analysis of over 60,000 electronic medical transactions within secured health portals. This book identifies the key converging influences that affected the real-life, early adopters amid this transformation process and provides a practical foundation for current, on-going practice applications while anticipating the inevitable challenges of future health communication technologies. Scholars of communication, health, and media studies will find this book particularly useful.

Minding the Heavens - Leila Belkora 2021-05-13

Today, we recognize that we live on a planet circling the sun, that our sun is just one of billions of stars in the galaxy we call the Milky Way, and that our galaxy is but one of billions born out of the Big Bang. Yet as recently as the early twentieth century, the general public and even astronomers had vague and confused notions about what lay beyond the visible stars. Can we see to the edge of the universe? Do we live in a system that would look, from a distance, like a spiral nebula? This fully updated second edition of *Minding the Heavens: The Story of Our Discovery of the Milky Way* explores how we learned that we live in a galaxy, in a universe of composed of galaxies and unseen, mysterious dark matter. The story unfolds through short biographies of seven astronomers: Thomas Wright, William Herschel, and Wilhelm Struve of the 18th and 19th centuries; the transitional figure of William Huggins; and Jacobus Kapteyn, Harlow Shapley, and Edwin Hubble of the modern, big-telescope era. Each contributed key insights to our present understanding of where we live in the cosmos, and each was directly inspired by the work of his predecessors to decipher "the construction of the heavens." Along the way the narrative weaves in the contributions of those in supportive roles, including Caroline Herschel—William's sister, and the first woman paid to do astronomy—and Martha Shapley, a mathematician in her own right who carried out calculations for her spouse. Through this historical perspective readers will gain a new appreciation of our magnificent Milky Way galaxy and of the beauties of the night sky, from ghostly nebulae to sparkling star clusters. Features: Fully updated throughout to reflect the latest in our understanding of the Milky Way, from our central supermassive black hole to the prospect of future mergers with other galaxies in our Local Group. Explains the significance of current research, including from the Gaia mission mapping our galaxy in unprecedented detail Unique and broadly appealing approach. A biographical framework and ample illustrations lead the reader by easy, enjoyable steps to a well-rounded understanding of the history of astronomy. Praise for the first edition— "A terrific blend of the science and the history." - Marth Haynes, Goldwin Smith Professor of Astronomy, Cornell University "The book is a treat... Highly recommended for public and academic libraries." -Peter Hepburn (now Head Librarian, College of the Canyons, Santa Clarita, California)

Competence in communicating across cultures is a prerequisite for success in today's fast-changing global community. In *Intercultural Communication*, Patel, Li and Sooknunan draw on their deep intercultural experience to show us how to build successful communication bridges across diverse cultures. The book explores various theoretical positions on global communication ethics and norms by providing an overview of the contemporary socio-cultural situation and seeking ways in which common ground may be found between these different positions. The Japanese LGBTQ+ Community in the World - Masami Tamagawa 2022-12-30

This study of the Japanese LGBTQ+ community sheds light on the intersectionality of lived experiences, including gender, sexuality, family, (mental) health, race and ethnicity, migration, and nationality, offering a picture of a community whose experience is deeply embedded in the dynamic society around. *The Japanese LGBTQ+ Community in the World* takes an innovative approach, viewing the community as an integral part of the world in flux, rather than an isolated monoracial and monolingual tightly-knit entity. Like the U.S. and many other countries in the world, when the pandemic struck Japan, its citizens were not all equally equipped to withstand it. Due particularly to lingering systemic injustices, including stigma, ostracism from family and society, as well as lack of legal protection of their basic human rights, the pandemic has disproportionately affected the lives of LGBTQ+ individuals and couples in Japan. They face unique challenges within various facets of their lives. Their experiences are an integral part of understanding how this pandemic is affecting a societal response to an already marginalized group of individuals. This important study looks at the issues from a range of perspectives including public health

care services, the media and cross-cultural experience. This book is ideal for students and scholars of gender studies, LGBTQ studies, sociology, health, and Asian studies.

**Doctor Who in Time and Space** - Gillian I. Leitch 2013-03-13

This collection of fresh essays addresses a broad range of topics in the BBC science fiction television series Doctor Who, both old (1963–1989) and new (2005–present). The book begins with the fan: There are essays on how the show is viewed and identified with, fan interactions with each other, reactions to changes, the wilderness years when it wasn't in production. Essays then look at the ways in which the stories are told (e.g., their timeliness, their use of time travel as a device, etc.). After discussing the stories and devices and themes, the essays turn to looking at the Doctor's female companions and how they evolve, are used, and changed by their journey with the Doctor.

**COSMO-97** - Leszek Roszkowski 1998-09-22

Deciphering the script for the Big Bang has now become a joint effort of particle physicists and cosmologists. The origin and first moments of the early Universe were determined by the same fundamental processes which are studied in terrestrial accelerators and whose traces from the early Universe can be seen in astrophysical observations. It is now almost universally accepted that most of the debris left over from the Big Bang is likely to be in the form of particle dark matter. Identifying its nature and measuring its abundance in the Universe have become major goals of theorists and experimentalists alike. This volume reviews the progress made at the frontiers of research in these rapidly expanding fields. A broad range of topics, from inflation to primordial black holes to physics at the Planck era, and to dark matter and neutrinos — both reviews and reports on the most recent advances — is presented by leaders in the field. **Gun Violence and Gun Control: Critical Engagements** - Annette Bailey 2022-06-09

This interdisciplinary anthology explores a wide range of intersecting issues contributing to and arising from gun violence. Millions of people are hurt and killed by gun violence globally, and the traumatic realities of these events are navigated by individuals and communities widely. In this context, gun violence fundamentally threatens social functioning in significant ways, and profoundly test the resilience of families. The resulting transformations carry social, political, legal and economic implications for mothering, family dynamics, and community engagement. This collaborative volume brings together diverse perspectives intended to deconstruct perceptions, realities, risks and impacts of gun violence, as seen by researchers, educators, community advocates, public health/health care experts, criminologists, social workers, field-based practitioners, and victims/survivors of gun violence. The distinct and broad range of contributions in this volume critically unpacks representations, stress and trauma, resilience, advocacy/activism, policymaking, family functioning, social justice and equity, governmentality and the criminal justice system, public health/health care, and community programs/interventions. Ultimately, the work is a unique contribution to the literature in which there is a lack of wide academic consideration of gun violence and a demonstrably unsatisfactory political response stretching back decades.

**Fragments of the World: Uses of Museum Collections** - Suzanne Keene 2006-08-11

During the past decade a number of individual museums have found imaginative ways of using their collections and of making them accessible. However, museum collections as a whole are enormous in size and quantity and the question of how can they can be put to best use is ever present. When conventional exhibitions can only ever utilise a tiny proportion of them, what other uses of the collections are possible? Will their exploitation and use now destroy their value for future generations? Should they simply be kept safely and as economically as possible as a resource for the future? Fragments of the World examines these questions, first reviewing the history of collecting and of collections, then discussing the ways in which the collections themselves are being used today. Case studies of leading examples from around the world illustrate the discussion. Bringing together the thinking about museum collections with case studies of the ways in which different types of collection are used, the book provides a roadmap for museums to make better use of this wonderful resource.

*Ultra Libris* - Rowland Lorimer 2012-10-09

Reflecting cultural, political, and technological changes, this detailed exploration of Canadian book publishing displays trends of the industry from the last 50 years. Against the backdrop of historical highlights, the book dives into modern events in book publishing, focusing on the explosion of national book publishing in the 1970s and detailing the sparring match between the industry and government during the 1970s through the 1990s. While industry and government policy both aimed at national survival in the face of globalization, the book documents how, beginning in the mid-1990s, Ontario established an emphasis on financial stability for the cultural sector accompanied by stimulants to encourage participation in domestic and international markets. This new vision laid the foundation for and anticipated the growing recognition of the creative economy worldwide. Coinciding with that recognition came an embrace of technology not just as a business catalyst, but also as a transformative medium for expression with the potential to change the nature of both book publishing and human understanding. Finally, the text concludes with a discourse on the future of books and book publishing, not only in Canada but in the world as a whole.
