A Taxonomy for Learning, Teaching, and Assessing - Benjamin Samuel Bloom 2001

This revision of Bloom's taxonomy is designed to help teachers understand and implement standards-based curriculums. Cognitive psychologists, curriculum specialists, teacher educators, and researchers have developed a two-dimensional framework, focusing on knowledge and cognitive processes. In combination, these two define what students are expected to learn in school. It explores curriculums from three unique perspectives-cognitive psychologists (learning emphasis), curriculum specialists and teacher educators (C & I emphasis), and measurement and assessment experts (assessment emphasis). This revisited framework allows you to connect learning in all areas of curriculum. Educators, or others interested in educational psychology or educational methods for grades K-12.

Grading for Equity - Joe Feldman 2018-09-25

"Joe Feldman shows us how we can use grading to help students become the leaders of their own learning and lift the veil on how to succeed. . . . This must-have book will help teachers learn to implement improved, equity-focused grading for impact." --Zaretta Hammond, Author of *Culturally Responsive Teaching & The Brain Crack* open the grading conversation Here at last—and none too soon—is a resource that delivers the research base, tools, and courage to tackle one of the most challenging and emotionally charged conversations in today's schools: our inconsistent grading practices and the ways they can inadvertently perpetuate the achievement and opportunity gaps among our students. With *Grading for Equity*, Joe Feldman cuts to the core of the conversation, revealing how grading practices that are accurate, bias-resistant, and motivational will improve learning, minimize grade inflation, reduce failure rates, and become a lever for creating stronger teacher-student relationships and more caring classrooms. Essential reading for schoolwide and individual book study or for student advocates, *Grading for Equity* provides A critical historical backdrop, describing how our inherited system of grading was originally set up as a sorting mechanism to provide or deny opportunity, control students, and endorse a "fixed mindset" about students' academic potential—practices that are still in place a century later A summary of the research on motivation and equitable teaching and learning, establishing a rock-solid foundation and a "true north" orientation toward equitable grading practices Specific grading practices that are more equitable, along with teacher examples, strategies to solve common hiccups and concerns, and evidence of effectiveness Reflection tools for facilitating individual or group engagement and understanding As Joe writes, "Grading practices are a mirror not just for students, but for us as their teachers." Each one of us should start by asking, "What do my grading practices say about who I am and what I believe?" Then, let's make the choice to do things

differently . . . with *Grading for Equity* as a dog-eared reference. *College Success* - Amy Baldwin 2020-03

Progress in Mathematics - Rose A. McDonnell 2006

Writing Pathways - Lucy Calkins 2014-10-14

"These assessment tools make progress in writing as transparent, concrete, and obtainable as possible and put ownership for this progress into the hands of learners, allowing students and teachers to work toward a very clear image of what good writing entails." -Lucy Calkins, *Writing Pathways* Lucy Calkins' groundbreaking performance assessments offer instructional tools to support continuous assessment, timely feedback, and clear goals tied to learning progressions that have been aligned with world-class standards. Originally published as part of the bestselling *Units of Study in Opinion/Argument, Information, and Narrative Writing*, grades K-8, *Writing Pathways* is ideal for writing workshop, but suitable for any writing instruction context or curriculum. This practical guide includes: Learning progressions for opinion/argument, information, and narrative writing, which map the specific benchmarks students will master for every grade level On-demand writing prompts that support schoolwide performance assessment Student checklists to help students set goals and integrate crucial self-assessment into their work Rubrics to support individual teachers and professional learning communities as they evaluate mastery and plan instruction within and across grade levels Student writing samples that illustrate different ways students have exemplified standards and highlight essential features of each writing genre Annotated exemplar pieces of writing on the same topic for every grade level that highlight the traits you can expect to see at each level of the learning progressions. Who needs *Writing Pathways*? Educators who are not yet ready to implement the full *Units of Study* curriculum can use *Writing Pathways* to get started with Lucy Calkins' proven approach to writing assessment and instruction. Coaches and administrators who are supporting implementation of Lucy Calkins' *Units of Study* will find *Writing Pathways* to be an ideal resource to guide their work. Who doesn't need *Writing Pathways*? The content in this stand-alone edition is the same as in the previous editions found in Lucy Calkins' *Units of Study* (K-5 and 6-8 are combined in this new edition). Teachers who have the *Units of Study* do not need this new edition.

Investigations - Stuart A. Kauffman 2002-09-19

"It may be that I have stumbled upon an adequate description of life itself." These modest yet profound words trumpet an imminent paradigm shift in scientific, economic, and technological thinking. In the tradition of Schrödinger's classic *What Is Life?*, Kauffman's *Investigations* is a tour-de-force exploration of the very essence of life itself, with conclusions that radically undermine the scientific approaches on which modern science rests--the approaches of Newton, Boltzman, Bohr, and Einstein. Building on his pivotal ideas about order and evolution in complex life systems, Kauffman finds that classical science does not take into account that physical systems--such as people in a biosphere--effect their dynamic environments in addition to being affected by them. These systems act on their own behalf as autonomous agents, but what defines them as such? In other words, what is life? Kauffman supplies a novel answer that goes beyond traditional scientific thinking by defining and explaining autonomous agents and work in the contexts of thermodynamics and of information theory. Much of *Investigations* unpacks the progressively surprising implications of his definition. Significantly, he sets the stages for a technological revolution in the coming decades. Scientists and engineers may soon seek to create autonomous agents--both organic and mechanical--that can not only construct things and work, but also reproduce themselves! Kauffman also lays out a foundation for a new concept of organization, and explores the requirements for the emergence of a general biology that will transcend terrestrial biology to seek laws governing biospheres anywhere in the cosmos. Moreover, he presents four candidate laws to explain how autonomous agents co-create their biosphere and the startling idea of a "co-creating" cosmos. A showcase of Kauffman's most fundamental and significant ideas, *Investigations* presents a new way of thinking about the fundamentals of general biology that will change the way we understand life itself--on this planet and anywhere else in the cosmos.

High School Mathematics Lessons to Explore, Understand, and Respond to Social Injustice - Robert Q. Berry III 2020-03-09

Empower students to be the change—join the teaching mathematics for social justice movement! We live in an era in which students have—through various media and their lived experiences—a more visceral experience of social, economic, and environmental injustices. However, when people think of social justice, mathematics is rarely the first thing that comes to mind. Through model lessons developed by over 30 diverse contributors, this book brings seemingly abstract high school mathematics content to life by connecting it to the issues students see and want to change in the world. Along with expert guidance from the lead authors, the lessons in this book explain how to teach mathematics for self- and community-empowerment. It walks teachers step-by-step through the process of using mathematics—across all high school content domains—as a tool to explore, understand, and respond to issues of social injustice including: environmental injustice; wealth inequality; food insecurity; and gender, LGBTQ, and racial discrimination. This book features: Content cross-referenced by mathematical concept and social issues Downloadable instructional materials for student use User-friendly and logical interior design for daily use Guidance for designing and implementing social justice lessons driven by your own students' unique passions and challenges Timelier than ever, teaching mathematics through the lens of social justice will connect content to students' daily lives, fortify their mathematical understanding, and expose them to issues that will make them responsive citizens and leaders in the future. **Envision Mathematics 2021 Common Core Student Edition Grade 7** - Scott Foresman 2019-11
