Renewing U.S. Telecommunications Research - National Research Council 2006-09-01

The modern telecommunications infrastructure"made possible by research performed over the last several decades" is an essential element of the U.S. economy. The U.S. position as a leader in telecommunications technology, however, is at risk because of the recent decline in domestic support of long-term, fundamental telecommunications research. To help understand this challenge, the National Science Foundation asked the NRC to assess the state of telecommunications research in the United States and recommend ways to halt the research decline. This report provides an examination of telecommunications research support levels, focus, and time horizon in industry, an assessment of university telecommunications research, and the implications of these findings on the health of the sector. Finally, it presents recommendations for enhancing U.S. telecommunications' research efforts.

Telecommunications Trade Act of 1984 - United States. Congress. Senate. Committee on Finance. Subcommittee on International Trade 1985

Competition Law and Regulation in European Telecommunications - Pierre Larouche 2000-05-01

Using numerous practical examples, this book examines the evolution of EC telecommunications law following the achievement of liberalisation, the main policy goal of the 1990s. After reviewing the development of regulation in the run-up to liberalisation, the author identifies the methods used to direct the liberalisation process and tests their validity in the post-liberalisation context. A critical analysis is made of the claim that competition law will offer sufficient means to regulate the sector in the future. Particular emphasis is given to the way in which EC Competition Law changed in the 1990s using the essential facilities doctrine, an expansive non-discrimination principle and the policing of cross-subsidisation to tackle what were then thought of as regulatory matters. Also examined within the work is the procedural and institutional interplay between competition law and telecommunications regulation. In conclusion, Larouche explores the limits of competition law and puts forward a long-term case for sector-specific regulation, with a precise mandate to ensure that the telecommunications sector as a whole fulfils its role as a foundation for economic and social activity.

Global Competitiveness of the U. S. Computer Software and Service Industries - DIANE Publishing Company 1995-10

Assesses the global competitiveness of the U.S. computer software and service industries through an examination of distinct market segments. Examines external factors, such as government policies (intellectual property protection, telecommunications regulations, and export controls), and education trends. Internal factors are also examined such as host management strategies and product development strategies, that impact these industries. The analysis focuses primarily on the U.S., Europe, and Japan. Charts, tables and graphs.

High-technology Competitiveness - United States. General Accounting Office 1992

Cached - Stephanie Ricker Schulte 2013-03-18

"This is the most culturally sophisticated history of the Internet yet written. We can't make sense of what the Internet means in our lives without reading Schulte's elegant account of what the Internet has meant at various points in the past 30 years." —Siva Vaidhyanathan, Chair of the Department of Media Studies at The University of Virginia In the 1980s and 1990s, the internet became a major player in the global economy and a revolutionary component of everyday life for much of the United States and the world. It offered users new ways to relate to one another, to share their lives, and to spend their time—shopping, working, learning, and even taking political or social action. Policymakers and news media attempted—and often struggled—to make sense of the emergence and expansion of this new technology. They imagined the internet in conflicting terms: as a toy for teenagers, a national security threat, a new democratic frontier, an information superhighway, a virtual reality, and a framework for promoting globalization and revolution. Schulte maintains that contested concepts had material consequences and helped shape not just our sense of the internet, but the development of the technology itself. *Cached* focuses on how people imagine and relate to technology, delving into the political and cultural debates that produced the internet as a core technology able to revise economics, politics, and culture, as well as to alter lived experience. Schulte illustrates the conflicting and indirect ways in which culture and policy

combined to produce this transformative technology. Stephanie Ricker Schulte is an Assistant Professor of Communication at the University of Arkansas. In the Critical Cultural Communication series **Telecommunication Policy Act** - United States. Congress. House. Committee on Energy and Commerce. Subcommittee on Telecommunications and Finance 1990

Global Competitiveness of U.S. Advanced-technology Industries - United States International Trade Commission 1993

Examines the global competitiveness of the U.S. cellular communications industry. Covers: cellular service providers, cellular network equipment manufacturers, and cellular phone manufacturers. Focuses principally on cellular communications industries in the U.S., Europe, and Japan. Includes: government policies, regulatory and trade impediments, and R&D financing and expenditures. Glossary. Charts, tables and graphs.

High-technology Competitiveness - United States. General Accounting Office. National Security and International Affairs Division 1992-08

Reports on U.S. competitiveness in a wide spectrum of high-technology areas, focusing on trade balances in high-tech products, R&D spending, patents, and scientific publications. Includes assessments of trends in the U.S. position over the past decade, particularly relative to Japan. 30 tables.

Cable-instructional TV and S. 1200 Communications Competitiveness and Infrastructure Modernization Act of 1991 - United States. Congress. Senate. Committee on Commerce, Science, and Transportation. Subcommittee on Communications 1992

Network World - 1990-08-20

For more than 20 years, Network World has been the premier provider of information, intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations. Readers are responsible for designing, implementing and managing the voice, data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce.

Telecommunications Equipment: U.S. Performance in Selected Major Markets, Staff Research Study #24 -

Competitiveness of New Industries - Cornelia Storz 2014-04-08

Many recent books on information and communication technologies concentrate on individual country experiences or neglect to analyze political factors in conjunction with entrepreneurial ones. This book, the result of an international research project, comprises a comprehensive comparison of three key countries: Japan, the United States and Germany. The book adopts an institutional approach.

Departments of Commerce, Justice, and State, the Judiciary, and Related Agencies Appropriations for 1989: The Judiciary - United States. Congress. House. Committee on Appropriations. Subcommittee on the Departments of Commerce, Justice, and State, the Judiciary, and Related Agencies 1988
