Micro-hydro Design Manual - Adam Harvey 1993-01

Micro-Hydro Design Manual has grown from Intermediate Technology's field experiences with micro-hydro installations and covers operation and maintenance, commissioning, electrical power, induction generators, electronic controllers, management, and energy surveys. There is an increasing need in many countries for power supplies to rural areas, partly to support industries, and partly to provide illumination at night. Government authorities are faced with the very high costs of extending electricity grids. Often micro-hydro provides an economic alternative to the grid. This is because independent micro-hydro schemes save on the cost of grid transmission lines, and because grid extension schemes often have very expensive equipment and staff costs. In contrast, micro-hydro schemes can be designed and built by local staff and smaller organizations following less strict regulations and using 'off-the-shelf' components or locally made machinery.

100,000 miles of solitude - Maarten Munnik 2012

For more than three years Maarten Munnik traveled on his motorbike around the world. From Europe through Asia to Australia, and from South America to Alaska. 100,000 miles of culture, adventure and most of all butt-pain. Every single day would be worthy of a chapter in this book, but there is just no printing-press large enough to print a book like that. Therefore you will have to settle with this collection of 'tales from the road'. Well aware of his own 'unsophisticated' view on the world, Maarten tells his tales the way he experienced them himself. He is no hero, not even a real adventurer. As he says himself: he is just stupid and naive and that combination leads him into, through and out of many unusual situations. Sometimes dramatic, sometimes hilarious, but always different.
