My Soul is a Woman - Annemarie Schimmel 2003-02-25

An internationally acclaimed scholar, who has dedicated more than fifty years of her life to understanding the Islamic world. Annemarie Schimmel examines a much-misunderstood feature of Islam: the role of women. Schimmel is critical of those--especially Western feminists--who take Islam to task without taking

the time to comprehend the cultures, language, and traditions of the many societies in which Islam is the majority religion. Shattering stereotypes, Schimmel reconstructs an important but little-known chapter of Islamic spirituality. With copious examples, she shows the clear equality of women and men the conception of the Prophet Muhammad, the Quran, the feminine language of the mystical tradition, and the role of holy mothers and unmarried women as manifestations of God. This work is studded with luminous texts from Arabic, Turkish, Persian, and particularly Indo-Muslim cultures, which reveal how physical love can give expression to the highest forms of mysticism.

Industrial Robot Specifications - Adrian Ioannou 1984-06-30

The industrial application of robots is growing steadily. This is reflected in the number of manufacturers now involved in the field of robotics. Thanks to pioneers such as Joseph Engelberger of Unimation Inc, industry has seen their rapid deployment in all areas of manufacturing. Manufacturers of robots and robotic equipment have increased their production levels and at the same time have made great efforts to improve and adapt their products to allow them to be used for a wider range of applications. The demand for ever more sophisticated robotic devices has made the choice of robot for a particular application an extremely hard one. Industrial Robot Specifications has been compiled to enable users to assess robotics in the context of their own needs. The book contains detailed information on over 300 robots manufactured and distributed under licence throughout Europe. More than 90 companies are covered, and details are given of their distributors and agents, regional addresses and names of key contacts. Information is provided on robots as diverse as simple teaching machines, costing perhaps £1500, to those highly sophisticated computer-controlled robot devices commonly found in flexible manufacturing systems, costing tens of thousands of pounds each. Introduction Industrial Robot Specifications is divided into three sections adjustable mechanisms that command manipulation.

The Southwest in American Literature and Art - David Warfield Teague 1997-10

By analyzing ways in which indigenous cultures described the American Southwest, David Teague persuasively argues against the destructive approach that Americans currently take to the region. Included are Native American legends and Spanish and Hispanic literature. As he traces ideas about the desert, Teague shows how literature and art represent the Southwest as a place to be sustained rather than transformed. 14 illustrations.

Leaders, Dreamers And Rebels - An Account Of The Great Mass-Movements Of History And Of The Wish-Dreams That Inspired Them - Rene Fulop-Miller 2013-04-16

Historical happenings are rooted in dreams no less than in the material and the ideal; and it is through dreams alone that both bodily need and philosophical cognition acquire that magical power which enables them to lay a spell upon millions and to transform the aspect of the world. This is the proposition that this book explores providing a comprehensive and informative look at the subject. This fascinating book here in its complete and unabridged form makes a worthy addition to the bookshelf of all those interested in this craft. Many of the earliest books, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

Inverse Methods in Electromagnetic Imaging - W.M Boerner 2014-08-23

This NATO Advanced Research Workshop on "Inverse Methods in Electro magnetic Imaging" has come at a time of greatly increased interest in using electromagnetic imaging methods as tools for remote sensing, material testing and medical diagnosis. Spurred by a combination of recent advances in sensor and device technology spanning the entire m-to-sub-mm wavelengths, the infra-red, optical, ultraviolet and x-ray regions of the electromagnetic spectrum, the rapid development of radar polarimetry including the deployment of active/passive sensors on spacecraft platforms, it has become evident that these advanced imaging techniques can only then become useful when supported by well-developed inverse scattering theories for proper consistent and efficient data interpretation. However, these data interpretative techniques, which are urgently needed in several military and civilian areas, are in many aspects not yet completely developed. Thus, the main purpose of this NATO-ARW-IMEI-1983 was to bring together internationally renowned key experts of this new scientific discipline of Inverse Methods in Electromagnetic Imaging and have them prepare well-written overviews, treatises on new areas, papers on special topics; have them deliberate on still unresolved problems in working discussion groups, and then report back on their important findings to the entire NATO Scientific Community in dealing with these exciting current developments.

The International Robot Industry Report - John Mortimer 2013-04-17

Like many other new technologies which have since been seized and exploited by others, the industrial robot is a British invention. In 1957, a patent was produced by a British inventor, Cyril Walter Kenward, and later it became crucial to the future of robotics. For across the Atlantic two robot builders, Unimation

and AMF, both infringed this patent and ultimately a cash settlement was made to Kenward. The owner of Unimation Inc. was Joseph Engelberger, an entrepreneur and avid reader of Isaac Asimov, the writer who helped to create the image of the benevolent robot. It is claimed that Engelberger's journey of fame down the road which led to him being hailed as the 'father of robotics' can be traced to the day that he met George C. Devol at a cocktail party. Devol was an inventor with an impressive list of patents to his name in the electronics field. One of Devol's patent applications referred to a Programmed Transfer Article. Devol's patent was issued in 1961 as US Patent 2,988,237, and this formed the basis of the Unimate robot which first saw the light of day in 1960. The first Unimate was sold to Ford Motor Company which used it to tend a die-casting machine. It is perhaps ironic that the first robot was used by a company which refused to recognise the machine as a robot, preferring instead to call it a Universal Transfer Device.

Basic Linear Design - Hank Zumbahlen 2005-01-01

Global Economic Prospects and the Developing Countries - 2002

This edition of the annual publication considers the need to reshape the global architecture of world trade, in order to help strengthen the economies of developing countries and reduce world poverty. The report focuses on four policy areas: the establishment of a development round of WTO negotiations to reduce trade barriers; global co-operation to expand trade outside the WTO; the adoption of pro-trade development policies by high-income countries; and enacting trade reforms in developing countries. The findings of the report suggest that developing countries could significantly increase their incomes, if all countries progressively implement the proposed trade reforms. This would result in a world with a much higher standard of living, an estimated 300 million people lifted out of poverty by 2015, and a significant increase in the number of children living beyond their fifth birthday throughout the developing world.

High Efficiency Silicon Solar Cells - Martin A. Green 1987-01-01

The early chapters comprehensively review the optical and transport properties of silicon. Light trapping is described in detail. Limits on the efficiency of silicon cells are discussed as well as material requirements necessary to approach these limits. The status of current approaches to passivating surfaces, contacts and

bulk regions is reviewed. The final section of the book describes the most practical approaches to the fabrication of high-efficiency cells capable of meeting the efficiency targets for both concentrated and non-concentrated sunlight, including a discussion of design and processing approaches for non-crystalline silicon.

Antenna Toolkit - Joseph Carr 2001-09-11

Joe Carr has provided radio amateurs and short-wave listeners with the definitive design guide for sending and receiving radio signals with Antenna Toolkit 2nd edition. Together with the powerful suite of CD software, the reader will have a complete solution for constructing or using an antenna - bar the actual hardware! The software provides a simple Windows-based aid to carrying out the design calculations at the heart of successful antenna design. All the user needs to do is select the antenna type and set the frequency - a much more fun and less error prone method than using a conventional calculator to solve formulae. The new edition has been revised to include further cases of propagation, additional antennas and also two new chapters - Small Loop Antennas (a topic of considerable interest, which has been the subject of much recent debate in the amateur radio press); and Yagi Beam Antennas (widely used at HF and VHF). The CD software has also been updated. Joe Carr's expertise in the area of antenna design is legendary. Antenna designers, whether hobbyist or technician, can be assured they need look no further than Antenna Toolkit for the complete guide to understanding the practicalities of using and designing antennas today. A complete solution for antenna design in one package. Includes free CD-ROM with state of the art software for all design calculations. The definitive guide to antenna design for radio amateurs and short-wave listeners.
