*Handbook of Disability Studies* - Gary L. Albrecht 2001

This path-breaking international handbook of disability studies signals the emergence of a vital new area of scholarship, social policy and activism. Drawing on the insights of disability scholars around the world and

the creative advice of an international editorial board, the book engages the reader in the critical issues and debates framing disability studies and places them in an historical and cultural context. Five years in the making, this one volume summarizes the ongoing discourse ranging across continents and traditional academic disciplines. To provide insight and perspective, the volume is divided into three sections: The shaping of disability studies as a field; experiencing disability; and, disability in context. Each section, written by world class figures, consists of original chapters designed to map the field and explore the key conceptual, theoretical, methodological, practice and policy issues that constitute the field. Each chapter provides a critical review of an area, positions and literature and an agenda for future research and practice. The handbook answers the need expressed by the disability community for a thought provoking, interdisciplinary, international examination of the vibrant field of disability studies. The book will be of interest to disabled people, scholars, policy makers and activists alike. The book aims to define the existing field, stimulate future debate, encourage respectful discourse between different interest groups and move the field a step forward.

Current Issues in Mathematical Linguistics - C. Martín-Vide 2014-06-28

The present volume contains some selected topics of current interest around the world in the mathematical analysis of natural language. The book is divided into four sections: - analytical algebraic models - models from the theory of formal grammars and automata, with interest mainly in syntax - model-theoretic concepts in semantics or pragmatics, and - a final section containing some applications in computational linguistics. The varied perspectives illustrated in the book confirm that Mathematical Linguistics has finally introduced scientific methods into a previously fuzzy field, through the use of mathematical reasoning. The text will contribute to a fruitful convergence between linguists, mathematicians, logicians, computer scientists, cognitive scientists and others interested in the formal treatment of natural language and the research of its properties.

Cultures, Communities, Competence, and Change - Forrest B. Tyler 2001-05-31

Cultures, Communities, Competence, and Change provides a transcultural psychosocial conception of the nature of individual and social activity. The author presents an integrated view of how people develop a psychosocially-based awareness of themselves and their milieus to shape what he refers to as their 'internested' social systems. In so doing he challenges current deficit/prevention emphases in the helping disciplines and promotes a constructive, prosocial model of individual and social approaches to change.

Staying on Track - Nigel Mansell 2015-09-24

After finishing as runner-up three times in the drivers' world championship, in 1992 Mansell finally secured the title. It was the crowning achievement of a hugely successful career, in which he won 31 Grand Prix, a record for a British driver that stood until Lewis Hamilton overhauled him in 2014. Always an aggressive driver, his exciting style meant he was hailed as a hero by his millions of fans in the UK and around the world. Out of the car, he was outspoken and charismatic, which merely served to enhance his reputation. Now, 20 years after he retired from F1, Mansell looks back on a stellar career in which he battled against many legends of the sport, from Lauda through the Senna and Prost years and on to Schumacher. He provides vivid insights into what it was like to race against those greats in an era when the risks to drivers were enormous. He explains what motivated him to get to the top, and takes the reader behind the scenes to give an unrivalled insight into the sport and the key moments of his career. Still closely involved in Formula One, Mansell assesses how F1 has changed, and gives his authoritative verdict on the sport, the cars and the drivers. It is an unmissable account from one of Britain's greatest sporting heroes.

A Disability of the Soul - Karen Nakamura 2013-06-13

Bethel House, located in a small fishing village in northern Japan, was founded in 1984 as an intentional community for people with schizophrenia and other psychiatric disorders. Using a unique, community approach to psychosocial recovery, Bethel House focuses as much on social integration as on therapeutic work. As a centerpiece of this approach, Bethel House started its own businesses in order to create employment and socialization opportunities for its residents and to change public attitudes toward the mentally ill, but also quite unintentionally provided a significant boost to the distressed local economy. Through its work programs, communal living, and close relationship between hospital and town, Bethel has been remarkably successful in carefully reintegrating its members into Japanese society. It has become known as a model alternative to long-term institutionalization. In *A Disability of the Soul*, Karen Nakamura explores how the members of this unique community struggle with their lives, their illnesses, and the meaning of community. Told through engaging historical narrative, insightful ethnographic vignettes, and compelling life stories, her account of Bethel House depicts its achievements and setbacks, its promises and limitations. *A Disability of the Soul* is a sensitive and multidimensional portrait of what it means to live with mental illness in contemporary Japan.
