*ECAT Assay Procedures A Manual of Laboratory Techniques* - J. Jespersen 2012-12-06

This book offers a description of current and recently developed laboratory assays in the field of haemostasis and thrombosis. It is the result of a unique cooperation between experts from more than 60 institutes in 12 European countries, brought together by the ECA T (European Concerted Action on Thrombosis and Disabilities) under the auspices of the Commission of the European Communities in Brussels, Belgium. The ECAT, which was initiated in 1981, designed and performed three prospective clinical studies to establish haemostatic factors as risk indicators of thrombosis. Included were patients with angina pectoris at risk from myocardial infarction, patients undergoing angioplasty at risk from re-stenosis, and patients receiving hip replacement at risk from deep venous thrombosis. Assay procedures were chosen, training courses for technicians held, and essential reagents were supplied from a central source. A quality control assessment scheme served to compare assay results both within and between laboratories. In the angina pectoris study, centres determined most of the assays locally; in the other two studies assays were performed centrally. The need for further quality assessment in Europe Dr J. F. Davidson in Glasgow, led to a separate activity coordinated by including coagulation inhibitors and plasminogen as risk factors for familial venous thrombosis. The Editors hope the ECA T Assay Procedures book will contribute to further harmonization of haemostasis assays, and ultimately to their standardization. The logic of chemical synthesis - E.J. Corey

*Transforming the Workforce for Children Birth Through Age 8* - National Research Council 2015-07-23

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care

and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.
