Rethinking Authority in Global Climate Governance -

Thomas Hickmann 2015-10-16

In the past few years, numerous authors have highlighted the emergence of transnational climate initiatives, such as city networks, private certification schemes, and business self-regulation in the policy domain of climate change. While these transnational governance arrangements can surely contribute to solving the problem of climate change, their development by different types of sub- and non-state actors does not imply a weakening of the intergovernmental level. On the contrary, many transnational climate initiatives use the international climate regime as a point of reference and have adopted various rules and procedures from international agreements. Rethinking Authority in Global Climate Governance puts forward this argument and

expands upon it, using case studies which suggest that the effective operation of transnational climate initiatives strongly relies on the existence of an international regulatory framework created by nation-states. Thus, this book emphasizes the centrality of the intergovernmental process clustered around the United Nations Framework Convention on Climate Change (UNFCCC) and underscores that multilateral treaty-making continues to be more important than many scholars and policy-makers suppose. This book will be of great interest to students and scholars of global environmental politics, climate change and sustainable development.

Governing the Climate-Energy Nexus -

Fariborz Zelli 2020-05-31

Combating climate change and transitioning to fossil-free energy are two central and interdependent challenges facing humanity today. Governing the nexus of these challenges is complex, and includes multiple

intergovernmental and transnational institutions. This book analyses the governance interactions between such institutions, and explores their consequences for legitimacy and effectiveness. Using a novel analytical framework, the contributors examine three policy fields: renewable energy, fossil fuel subsidy reform, and carbon pricing. These fields are compared in terms of their institutional memberships, governance functions and overarching norms. Bringing together prominent researchers from political science and international relations, the book offers an essential resource for future research and provides policy recommendations for effective and legitimate governance of the climate-energy nexus. Rooted in the most recent research, it is an invaluable reference for researchers, policymakers and other stakeholders in climate change and energy politics.

The Fragmentation of Global Climate Governance - Harro

van Asselt 2014-04-25

Transgovernance - Louis Meuleman 2012-09-14

'Transgovernance: Advancing Sustainability Governance' analyses the question what recent and ongoing changes in the relations between politics, science and media - together characterized as the emergence of a knowledge democracy - may imply for governance for sustainable development, on global and other levels of societal decision making, and the other way around: How can the discussion on sustainable development contribute to a knowledge democracy? How can concepts such as second modernity, reflexivity, configuration theory, (meta)governance theory and

cultural theory contribute to a 'transgovernance' approach which goes beyond mainstream sustainability governance? This volume presents contributions from various angles: international relations, governance and metagovernance theory, (environmental) economics and innovation science. It offers challenging insights regarding institutions and transformation processes, and on the paradigms behind contemporary sustainability governance. This book gives the sustainability governance debate a new context. It transforms classical questions into new options for societal decision making and identifies starting points and strategies towards effective governance of transitions to sustainability.

Research Handbook on Global Climate

Constitutionalism - Jordi

Jaria-Manzano 2019-12-27

Climate change is causing traditional political and legal concepts to be revisited. The emergence of a global polity through physical, economic

and social interaction demands global responses which should be founded upon new principles and which cannot simply be modelled on traditional constitutionalism centred on the nation-state.

This Research Handbook explores how to build this climate constitutionalism at a global level, starting from the narrative of Anthropocene and its implications for law. It provides a critical approach to global environmental constitutionalism, analysing the problems of sustainability and global equity which are entwined with the causes and consequences of climate change. The Handbook explores how to develop constitutional discourses and strategies to address these issues, and thereby tackle the negative effects of climate change whilst also advancing a more sustainable, equitable and responsible global society.

Climate Governance at the Crossroads - Matthew J.

Hoffmann 2011-03-16

Provides a systematic assessment of climate change

initiatives that have emerged across the globe independent of United Nations sponsored negotiations and treaties.

Global Climate Governance Beyond 2012 - Frank Biermann
2010-02-18

An assessment of policy options for future global climate governance, written by a team of leading experts from the European Union and developing countries. Global climate governance is at a crossroads. The 1997 Kyoto Protocol was merely a first step, and its core commitments expire in 2012. This book addresses three questions which will be central to any new climate agreement. What is the most effective overall legal and institutional architecture for successful and

equitable climate politics? What role should non-state actors play, including multinational corporations, non-governmental organizations, public-private partnerships and market mechanisms in general? How can we deal with the growing challenge of adapting our existing institutions to a substantially warmer world? This important resource offers policy practitioners in-depth qualitative and quantitative assessments of the costs and benefits of various policy options, and also offers academics from wide-ranging disciplines insight into innovative interdisciplinary approaches towards international climate negotiations.

Global Environmental Governance Reconsidered -

Frank Biermann 2012-07-06

An examination of three major trends in global governance, exemplified by developments in transnational environmental rule-setting. The notion of global governance is widely studied in academia and

increasingly relevant to politics and policy making. Yet many of its fundamental elements remain unclear in both theory and practice. This book offers a fresh perspective by analyzing global governance in terms of three major trends, as exemplified by developments in global sustainability governance: the emergence of nonstate actors; new mechanisms of transnational cooperation; and increasingly segmented and overlapping layers of authority. The book, which is the synthesis of a ten-year "Global Governance Project" carried out by thirteen leading European research institutions, first examines new nonstate actors, focusing on international bureaucracies, global corporations, and transnational networks of scientists; then investigates novel mechanisms of global governance, particularly transnational environmental regimes, public-private partnerships, and market-based arrangements; and, finally, looks at fragmentation of authority, both vertically

among supranational, international, national, and subnational layers, and horizontally among different parallel rule-making systems. The implications, potential, and realities of global environmental governance are defining questions for our generation. This book distills key insights from the past and outlines the most important research challenges for the future.

Garbage and Recycling - Candice L. Mancini 2010-11-24
Editor Candice L. Mancini uses a series of thought-provoking essays to take readers across the globe, exploring international issues relating to garbage and recycling. Is E-waste dangerous in India? Is the Nile being ruined by pollution? Is Serbia doing enough to focus on their waste problems? Is Bangladesh's capital swimming in waste? How is China turning trash into art? Readers will explore these questions. They will learn whether Mexico City is running out of places to dump waste and whether the U.S. has a

serious issue with plastic bags. Other cultures explored include Canada, Japan, Australia, Spain, the Philippines, and Sweden. One final treat for readers is they'll explore garbage and recycling in space.

Handbook on Global Governance and Regionalism -

Jürgen Rüländ 2022-11-18

This Handbook expertly explores the profound transformations in international relations in recent decades. Proliferating cross-border challenges, including global financial crises, climate change, environmental degradation, irregular migration, and COVID-19, require governance structures that transcend the nation state and take both global and regional interplay, as well as problem-solving

capacities, into account. Contributing authors investigate the effectiveness of international cooperation and performance in a diverse range of policy fields.

Climate Change, Human Security and Violent Conflict - Jürgen Scheffran

2012-05-26

Severe droughts, damaging floods and mass migration: Climate change is becoming a focal point for security and conflict research and a challenge for the world's governance structures. But how severe are the security risks and conflict potentials of climate change? Could global warming trigger a sequence of events leading to economic

decline, social unrest and political instability? What are the causal relationships between resource scarcity and violent conflict? This book brings together international experts to explore these questions using in-depth case studies from around the world. Furthermore, the authors discuss strategies, institutions and cooperative approaches to stabilize the climate-society interaction.

Global Cities, Governance and Diplomacy - Michele Acuto 2013

The book argues that looking at global cities can bring about three fundamental advantages on traditional IR paradigms. First, it facilitates an eclectic

turn towards more nuanced analyses of world politics. Second, it widens the horizon of the discipline through a multiscalar image of global governance. Third, it underscores how global cities have a strategic diplomatic positioning when it comes to core contemporary challenges such as climate change.

The EU, the US and Global Climate Governance - Christine Bakker 2016-02-17

This volume presents a critical analysis of transatlantic relations in the field of environmental governance and climate change. The work focuses on understanding the possible trends in the evolution of global environmental governance and the prospects for breaking the current impasse on climate action.

Drawing on research involving experts from eleven different universities and institutes, the authors provide innovative analyses on policy measures taken by the EU and the US, the world's largest economic and commercial blocs, in a number of fields, ranging from

general attitudes on environmental leadership with regard to climate change, to energy policies, new technologies for hydrocarbons extraction and carbon capture, as well as the effects of extreme weather events on climate-related political attitudes. The book examines the way in which the current attitudes of the EU and the US with regard to climate change will affect international cooperation and the building of consensus on possible climate policies, and looks to the future for international environmental governance, arguably one of the most pressing concerns of civilisation today. This book, which is based on research carried out in the context of the EU-financed FP7 research project TRANSWORLD, will appeal to academics, policy makers and practitioners seeking a deeper understanding of the challenges resulting from climate change.

[Research Handbook on Climate Governance](#) - Karin Bäckstrand 2015-11-27

The 2009 United Nations climate conference in Copenhagen is often represented as a watershed in global climate politics, when the diplomatic efforts to negotiate a successor agreement to the Kyoto Protocol failed and was replaced by a fragmented and decentralized climate governance order. In the post-Copenhagen landscape the top-down universal approach to climate governance has gradually given way to a more complex, hybrid and dispersed political landscape involving multiple actors, arenas and sites. The Handbook contains contributions from more than 50 internationally leading scholars and explores the latest trends and theoretical developments of the climate governance scholarship.

From the Paris Agreement to a Low-Carbon Bretton

Woods - Michele Stua
2017-03-02

This book investigates the existing and possible links between the concept of a Carbon Club and the Paris

Agreement. In doing so the book defines those criteria that may lead to an effective establishment of a Carbon Club acting within the mandate of the Paris Agreement and identifies the key questions that such an option may help to tackle: Which low-carbon pathways are compatible with the new temperature targets set by the Paris Agreement? Can new entities like the Carbon Club have a decisive role in guaranteeing the alignment of the aggregate mitigating actions with the global objectives identified within the Paris Agreement? What role will be played by market and non-market approaches within the proposed framework? How can economic, social, and environmental sustainability be ensured during the implementation of the Agreement? How can justice and equity be encouraged between the Parties and all the involved actors as required by the Agreement? Which instruments can be designed and adopted to provide the

expected degree of transparency for the new system? To respond to these questions the book adopts a holistic approach, able to emphasize the strong interrelations. The book discusses the opportunity to develop a Carbon Club within the Article 6 framework, and provides a feasible roadmap for its means of implementation, rules and governance structure. The final result is a feasible policy proposal that takes into account all the key issues introduced by the questions, and draws a roadmap towards a 'low-carbon Bretton Woods'.

Climate Change and International Trade - Rafael

Leal-Arcas 2013-01-01

Rafael Leal-Arcas expertly examines the interface of climate change mitigation and international trade law with a view to addressing the question: How can we make best use of the international trading system experience to aim at a global climate change agreement? The insightful book contributes to developing the

architecture for a post- 2012 global climate agreement and, in doing so, seeks and proposes new approaches to climate change mitigation by linking it to the international trade system. The author suggests the adoption of a bottom-up approach to climate change negotiations by using the evolution of multilateral trade agreements as a model for reaching a global climate treaty. He discusses the innovative approach of inserting climate goals within regional trade agreements, given their proliferation - especially bilateral - in the international trading system. He explains the trade implications of climate change mitigation policies by analyzing a couple of areas where the international regimes for trade and climate change mitigation may potentially clash. Climate Change and International Trade will strongly appeal to undergraduate and graduate students of international and European trade law, international and European environmental law as well as

social science academics, NGOs, think tanks, practitioners, researchers, and international organizations will also find plenty of valuable information in this timely resource.

Global Warming Gridlock -

David G. Victor 2011-03-10

Global warming is one of today's greatest challenges.

The science of climate change leaves no doubt that policies to cut emissions are overdue. Yet, after twenty years of international talks and treaties, the world is now in gridlock about how best to do this.

David Victor argues that such gridlock has arisen because international talks have drifted away from the reality of what countries are willing and able to implement at home. Most of the lessons that policy makers have drawn from the history of other international environmental problems won't actually work on the problem of global warming. Victor argues that a radical rethinking of global warming policy is required and shows how to make international law on

global warming more effective. This book provides a roadmap to a lower carbon future based on encouraging bottom-up initiatives at national, regional and global levels, leveraging national self-interest rather than wishful thinking.

Why Democracies Flounder and Fail - Michael Haas
2018-06-26

Democracy is in crisis because voices of the people are ignored due to a politics of mass society. After demonstrating how the French Fourth Republic failed, wherein Singapore's totalitarianism is a dangerous model, Washington is enmeshed in gridlock, and there is a global democracy deficit, solutions are offered to revitalize democracy as the best form of government. The book demonstrates how mass society politics operates, with intermediate institutions of civil society (media, pressure groups, political parties) no longer transmitting the will of the people to government but instead are concerned with corporate interests and have developed oligarchical

mindsets. Rather than micro-remedy bandaids, the author focuses on the need to transform governing philosophies from pragmatic to humanistic solutions.

Global Capitalism and Climate Change - Hans A. Baer 2021-10
Now in its second edition, *Global Capitalism and Climate Change* situates anthropogenic climate change in the context of global capitalism as it stands today and explores the systemic changes necessary to create a more socially just, democratic, and environmentally sustainable world system.

Earth System Governance - Frank Biermann 2014-11-28

A new model for effective global environmental governance in an era of human-caused planetary transformation and disruption. Humans are no longer spectators who need to adapt to their natural environment. Our impact on the earth has caused changes that are outside the range of natural variability and are equivalent to such major geological disruptions as ice ages. Some scientists argue that we have entered a new epoch in planetary history: the Anthropocene. In such an era of planet-wide transformation,

we need a new model for planet-wide environmental politics. In this book, Frank Biermann proposes “earth system” governance as just such a new paradigm. Biermann offers both analytical and normative perspectives. He provides detailed analysis of global environmental politics in terms of five dimensions of effective governance: agency, particularly agency beyond that of state actors; architecture of governance, from local to global levels; accountability and legitimacy; equitable allocation of resources; and adaptiveness of governance systems. Biermann goes on to offer a wide range of policy proposals for future environmental governance and a revitalized United Nations, including the establishment of a World Environment Organization and a UN Sustainable Development Council, new mechanisms for strengthened representation of civil society and scientists in global decision making, innovative systems of qualified majority voting in multilateral

negotiations, and novel institutions to protect those impacted by global change. Drawing on ten years of research, Biermann formulates earth system governance as an empirical reality and a political necessity.

Carbon Markets or Climate Finance - Axel Michaelowa
2012-01-16

This book builds on a decade-long experience with mechanisms provided by the Kyoto Protocol and the UN Framework Convention on Climate Change. It discusses the challenges of climate finance in the context of the post-Copenhagen negotiations and provides a long-term outlook of how climate finance in developing countries could develop. Written by climate finance experts from academia, carbon finance businesses and international organisations, the book provides background, firsthand insights, case studies and analysis into the complex subject area of climate finance. *Climate Change and Migration* - Gregory White 2011-10-12
Examines how climate-induced

migration, the relocation of individuals from harsh climate areas to more favorable ones, has led to concerns about national borders, sovereignty, and security, along with suggestions to combat the situation.

Hague Yearbook of International Law / Annuaire de La Haye de Droit

International, Vol. 23 (2010) -

Nikos Lavranos 2019-03-25

The title of the Hague Yearbook of International Law reflects the close ties which have always existed between the AAA and the City of The Hague with its international law institutions, and indicates the Yearbook's aim of devoting attention to developments taking place in the international law institutions based in The Hague. However, the Yearbook has a broader scope as well: to offer a

platform for review of new developments in the field of international law. As of the 2010 Volume, the Yearbook will be compiled by a new and expanded Editorial Board, offering fresh ideas and a new approach. A newly established Advisory Board has also been added, including ICJ Judge Bruno Simma, Serge Brammertz, Prosecutor of the International Criminal Tribunal for the Former Yugoslavia (ICTY), Jacomijn J. van Haersolte-van Hof, advocate (advocaat) at HaersolteHof and arbitrator (The Netherlands) and Professor Peter Hilpold, Innsbruck University (Austria). Sections have been created on public international law, private international law, international investment law and international criminal law, containing in-depth articles on current issues. The breadth of the Yearbook's content thus offers an interesting and valuable illustration of the dynamic developments in the various sub-areas of international law.

Community-based adaptation -

Hannah Reid 2017-10-02
Community-based adaptation (CBA) to climate change is based on local priorities, needs, knowledge and capacities. Early CBA initiatives were generally implemented by non-government organisations (NGOs), and operated primarily at the local level. Many used 'bottom-up' participatory processes to identify the climate change problem and appropriate responses. Small localised stand-alone initiatives are insufficient to address the scale of challenges climate change will bring, however. The causes of vulnerability - such as market or service access, or good governance - also often operate beyond the project level. Larger organisations and national governments have therefore started to implement broader CBA programmes, which provide opportunities to scale up responses and integrate CBA into higher levels of policy and planning. This book shows that it is possible for CBA to remain centred on local priorities, but not necessarily

limited to work implemented at the local level. Some chapters address the issue of mainstreaming CBA into government policy and planning processes or into city or sectoral level plans (e.g. on agriculture). Others look at how gender and children's issues should be mainstreamed into adaptation planning itself, and others describe how tools can be applied, and finance delivered for effective mainstreaming. This book was published as a special issue of *Climate and Development*. *The Oxford Handbook of Climate Change and Society* - John S. Dryzek 2011-08-18
Climate change presents perhaps the most profound challenge ever confronted by human society. This volume is a definitive analysis drawing on the best thinking on questions of how climate change affects human systems, and how societies can, do, and should respond. Key topics covered include the history of the issues, social and political reception of climate science, the denial of that science by

individuals and organized interests, the nature of the social disruptions caused by climate change, the economics of those disruptions and possible responses to them, questions of human security and social justice, obligations to future generations, policy instruments for reducing greenhouse gas emissions, and governance at local, regional, national, international, and global levels.

Climate Change 2014: Mitigation of Climate Change - Ottmar Edenhofer 2015-01-26
This latest Fifth Assessment Report of the IPCC will again form the standard reference for all those concerned with climate change and its consequences.

Governing Climate Change - Andrew Jordan 2018-05-03

Procedural Justice in the

United Nations Framework Convention on Climate Change

- Luke Tomlinson 2015-04-28

This book considers what is needed for fairness in the decisions of the UNFCCC. It analyses several principles of procedural fairness in order to develop practical policy measures for fair decision-making in the UNFCCC. This includes measures that determine who should have a right to participate in its decisions, how these decisions should take place and what level of equality should exist between these actors. In doing so, it proposes that procedural fairness is a fundamental feature of a multilateral response to address climate change. By showing that procedural fairness is most likely to be achieved through the inclusive process of the UNFCCC, it also shows that global efforts to address climate change should continue in this forum.

Governing Climate Change - Andrew Jordan 2018-04-30
Climate change governance is in a state of enormous flux.

New and more dynamic forms of governing are appearing around the international climate regime centred on the United Nations Framework Convention on Climate Change (UNFCCC). They appear to be emerging spontaneously from the bottom up, producing a more dispersed pattern of governing, which Nobel Laureate Elinor Ostrom famously described as 'polycentric'. This book brings together contributions from some of the world's foremost experts to provide the first systematic test of the ability of polycentric thinking to explain and enhance societal attempts to govern climate change. It is ideal for researchers in public policy, international relations, environmental science, environmental management, politics, law and public administration. It will also be useful on advanced courses in climate policy and governance, and for practitioners seeking incisive summaries of developments in particular sub-areas and sectors. This title is also available as Open Access

on Cambridge Core.

Architectures of Earth System Governance - Frank Biermann 2020-05-07

An authoritative analysis of [a decade of] research on institutional architectures in earth system governance, covering key elements, structures and policy options.

Divergence and Convergence of Automobile Fuel Economy Regulations - Masahiko Iguchi 2015-04-08

This book reveals the mechanisms underlying the convergence of car fuel economy regulations in Europe, Japan and the US by drawing upon a constructivist theory of International Relations and law that focuses on business competition and environmental regulations. It offers new understanding of the topic of cars and an issue of climate change, discussing the emerging phenomenon of convergence of fuel economy regulations; addressing the role of business actors in pushing for climate change action; proposing the new model of agency with and

beyond states; and providing insightful case studies from Europe, Japan and the US. The opening chapter reviews the automobile industry and global climate change, providing a background for the discussion to follow. Chapter 2, Business Actors and Global Environmental Governance, grounds the discussion in the field of environmental governance. The third chapter is a case study examining the construction and timing of the European Union's climate policies for automobile CO2 emissions, discussing the underlying factors and the actors influencing the policies. The following chapter argues that Japan adopted its stringent fuel economy regulations primarily because of industry competitiveness, motivated by stringent environmental regulations in export markets and encouraged by a tradition of 'co-regulation' and 'corporatism' to enhance the regulations. Chapter 5 asks why the US, the first country to introduce fuel economy regulations, spent two decades

in regulatory stagnation, and discusses how recent US fuel economy regulations came to converge with Japanese and European standards. Chapter 6 compares, contrasts and analyzes fuel economy regulations among the three case studies and identifies policy implications for the future climate governance for 2015 and beyond. The final chapter explores applicability of the 'agency with and beyond the state' model to other sectors and to climate governance as a whole. *Global Climate and Energy Governance* - Harald L. Heubaum 2021-12-31 Tracing the changing activities of international bureaucracies active in global climate and energy governance, this book provides an in-depth analysis of processes of institutional innovation and governance integration between the two fields. It shows that rather than the consequence of a designed strategy, governance integration - the convergence of approaches and practices among different actors within

one or between two or more governance architectures - has come as the result of organizational changes arising from the international bureaucracies' various efforts to pursue and broaden their mandate in a complex and dynamic global policy environment. Each of the three cases analyzed (the UNFCCC Secretariat, the IEA Secretariat and the World Bank) began their life focused on particular activities that today, following periods of sustained organizational change, make up only part of their operations. Beyond creating greater synergies for cooperation across the

governance architectures, improving policies, and mobilizing greater investment to tackle the climate emergency, the book shows governance integration to have contributed to preserving and expanding the role and relevance of all three international bureaucracies. This book will be of interest to students and scholars of global climate and energy governance, climate policy, and international organizations and their bureaucratic arms. Practitioners will find this book useful in thinking about why innovation in governance emerges and how it may be directed.
